Textile Organon

Vol 53, No. 10 · October 1982

A publication of the Textile Economics Bureau, Inc.

MONTHLY REVIEW

Highlights

6-Month Net Import Balance of Man-Made Fiber Manufactures Totals 113.8 Million Pounds . . . see page 197.

1981 Selected Exports of Man-Made Fiber to Eastern Europe & PRC . . . featured page 204.

1981 Exports of Man-Made Fiber to Certain Nonproducing Countries . . . featured page 205.

First Quarter Broad Weaving Industry Data . . . begins page 198.

Shipments of nylon yarn to the carpet trades fell in September, though shipments of nylon industrial yarn rose to the highest level since June and shipments of nylon textile yarn rose to the highest level yet recorded this year.

Shipments of polyester industrial yarn fell in September, yet shipments of polyester textile yarn rose to the highest level since May.

Olefin yarn+monofilament shipments fell to the lowest level since July of 1979, while shipments of olefin+vinyon staple+tow rose in September.

Both polyester and acrylic+modacrylic staple+tow shipments were off in September, but shipments of nylon staple+tow increased to the highest level in over a year.

NATURAL FIBER SPECIAL REPORT

The December issue of the ***Textile Organon*** will feature a special report on the production and consumption of cotton and wool and their relationship to man-made fibers in the United States and worldwide.

This report will utilize much of the natural fiber data traditionally published in the October and December issues of the ***Organon***. In addition, these natural fiber data will be integrated with man-made fiber data to form a new, comprehensive approach to analyzing the relationship of cotton and wool to man-made fibers.

MONSANTO TO DROP POLYESTER STAPLE OPERATION

Monsanto Co. has decided to end its polyester staple business. The company announced that the Decatur, AL, plant will stop making polyester staple by the end of October 1982. The plant will, however, continue to produce acrylic and modacrylic staple and tow.

In addition to its acrylic and modacrylic operations at Decatur, the company also has plants in Pensacola, FL, and Greenwood, SC, where nylon yarn and staple are produced.

EXPORTS TO EASTERN EUROPE & PRC

The table on page 204 is divided into two sections. The upper section details the 1979-1981 selected exports of man-made fibers by 16 producing countries to Eastern Europe and the People's Republic of China. The lower section shows the destination of these exports by country.

For 1981, exports amounted to 1,845.0 million pounds, an increase of 25% over the 1,480.5 million pounds recorded in 1980. It should be noted that the United States was the largest exporter to these countries, followed by Japan, West Germany and Italy. Up until 1980, Japan had traditionally been the largest exporter of man-made fiber to Eastern Europe and the PRC.

The principal recipient in 1981 of these man-made fibers was the People's Republic of China, which imported 1,313.0 million pounds, or 71%, of the total man-made fiber exported by the 16 producing countries. In addition, it is interesting to note that since 1979 the PRC's share of total fiber exported has risen steadily, from 44% in 1979, to 59% in 1980 and 71% in 1981. Following the PRC in order of volume for 1981 were the USSR, Yugoslavia and Hungary.

SOURCES: The man-made fiber import and export data are from the U.S. Bureau of the Census. The man-made, cotton and wool manufactures data are from *"Cotton and Wool Situation,"* a publication of the U.S. Department of Agriculture.

The total man-made fiber and manufactures import, export and balance data of this table cover the cellulosic and noncellulosic fibers only; textile glass fiber is excluded.

[a] **E** means a net export balance; **I** is a net import balance.

[b] The fibers included are shown under "Total Man-Made Fiber Above" on pages 206 and 207 herewith.

[c] Man-made fiber equivalent.

[d] Raw cotton equivalent. Data are similar to those on page 45 of the March 1982 ***Organon***.

[e] Raw wool content. The data differ from those on page 45 of the March 1982 ***Organon*** to the extent that noils and waste are included here.

a. Includes data from all types of broad woven fabric mills, i.e., cotton, man-made, woolen & worsted and tire cord & fabric mills.

b. Includes 100% spun rayon and acetate as well as rayon and/or acetate/cotton blends, regardless of blend level.

c. Regardless of blend level.

d. All Other Yarns includes spun nylon, other blends, silk and paper.

SOURCE: U.S. Census Bureau, *Current Industrial Report MQ-22T.*

a. Drapery & Bedspread Fabrics has been dropped from this category because any type of fabric can be used for those purposes and including it amounted to double-counting.

b. Felts are not included.

c. Acrylic+modacrylic and polyester. Does not include polyester for 3rd & 4th Q 1981.

d. Acrylic+modacrylic only.

e. Includes polyester blanketing.

f. Includes filament & spun yarn fabrics.

g. 100% or chiefly man-made fibers; chief fiber not specified. Also includes small poundages of tie, twisted paper yarn and girdle & swimwear fabrics.

EXPORTS TO NONPRODUCING COUNTRIES

Exports by the selected producing countries to nonproducing countries are depicted in the table on page 205. In this table only the aggregate exports to nonproducing countries which imported a total of 200,000 pounds or more of man-made fiber (excluding textile glass fiber) are itemized. Countries which imported lesser amounts are grouped under the "Other" category for each region. The data cannot be regarded as all-inclusive or statistically exact; rather, they indicate the relative importance of the listed countries as importers of man-made fiber.

Although North Korea reportedly produces man-made fibers, no official data are available. Rather, North Korea is considered a "nonproducer" and is included in this table, as is Guatemala, which has within the last few years begun production of man-made fibers.

Countries which produce only olefin fiber, for example, Denmark, El Salvador, Honduras and Nicaragua, are also included in this tabulation.

SUMMARY OF EXPORTS

The following table presents a rough summary of the export distribution of the selected producing countries for the years 1979-1981. For this period, the net export balances for these countries were, respectively, 3,157.0, 3,357.0 and 3,646.0 million pounds. These exports went to Eastern Europe and the People's Republic of China, to other producing countries and to countries which do not produce man-made fibers; in the table, these poundages are presented, respectively, on lines 2, 4 and 3.

Concerning other aspects of the table, line 4 is derived by subtracting the exports of lines 2 and 3 from the net exports shown in line 1. Line 5 shows the total imports of other producing countries (excluding Eastern Europe and the People's Republic of China). Line 6 is simply the difference between line 4 and 5. These poundages may include: a) imports from Eastern Europe and the People's Republic of China, b) imports from producing countries other than the selected producing

SOURCE: U.S. Census Bureau, *Current Industrial Report MQ-22T.*

a. Also includes marquisettes, ninons and other sheers.

b. Includes household fabrics (marquisettes, drapery, upholstery, etc.).

c. Includes marquisettes, ninons, sheers, industrials and twills.

d. Includes marquisettes, ninons, sheers, industrials, taffetas and satins.

e. Includes filament combinations, chiefly rayon, and saran & olefin.

f. Except blanketing.

g. Includes carded broadcloth.

h. Included in All Other Spun Polyester Blends With Cotton below.

i. Includes seersucker and piece-dyed pattern fabrics. Also includes sateens for 1st Q 1982.

j. Drapery & Bedspread Fabrics has been dropped from this category because any type of fabric can be used for those purposes and including it amounted to double counting.

k. Includes tie, twisted paper yarn and girdle & swimwear fabrics.

a. Yarn means filament yarn, monofilaments, tire cord & tire cord fabric.

b. Staple includes tow, tops and spun yarn.

c. Data for Greece were not included with those from the EEC until 1981.

d. No data from Ireland were included prior to 1980.

e. Data for the United Kingdom for 1981 were estimated, based on 1980 figures.

(Continued from page 200)

countries and c) imports of textured and spun yarn from "nonproducing" countries.

It should be noted that line 1 is taken from the July issues of 1980 and 1981 and the September 1982 issue of the ***Organon***. The July issues show the data in millions of pounds, whereas the September issue presents the data in thousands of metric tons, which were subsequently converted to millions of pounds for the purpose of this summary table.

	1979	1980	1981
1. NET EXPORTS OF THE 16 PRODUCING COUNTRIES[a]	3,157.0	3,357.0	3,646.0
AS DISTRIBUTED TO -			
2. EASTERN EUROPE & PRC	865.8	1,480.5	1,845.0
3. NONPRODUCING COUNTRIES	602.0	598.5	627.6
4. OTHER[b] (1-2-3)	1,689.2	1,278.0	1,173.4
5. NET IMPORTS OF OTHER[b]	1,112.3	1,395.5	1,548.1
6. OTHER[b] IMPORT DIFFERENCE (5-4)	-576.9	+117.5	+374.7

a. Includes Greece in 1981 only.

b. Free World producing countries other than the selected producing countries.

1 & 5. From page 183 of the September ***Organon***.

2. From table above.

3. From table opposite.

---

a. See the upper section of the page 204 table for a listing of the 16 exporting countries. Also see text page 200 regarding the concept and meaning of this table.

b. Yarn means filament yarn, monofilaments, tire cord & tire cord fabric. Staple includes spun yarn.

c. The Danish data are net imports from the 16 countries. Data from the Faerøe Islands are also included.

d. Gibraltar.

e. Bahamas, Barbados, Belize, Bermuda, Cayman Is., French Guiana, French West Indies, Leeward & Windward Is., Netherlands Antilles and St. Pierre & Miquelon.

f. See text page 200 regarding this country.

g. Sri Lanka now produces nylon fiber and will no longer be included in this table.

h. French Polynesia, Kiribati, Macao, Mongolia, New Caledonia, Oman, Papua New Guinea, Qatar and Western Samoa.

i. Uganda only. Kenya now produces both nylon and polyester and will no longer be included in this table.

j. Benin, Burundi, Cape Verde, Central African Republic, Chad, Comoros, Congo, Djibouti, Equatorial Guinea, Gabon, Gambia, Guinea-Bissau, Malagasy Rep., Mali, Mauritania, Reunion, Rwanda, Sierra Leone, Somalia, Togo and Upper Volta.

SOURCE: U.S. Census Bureau.

a. Includes thrown, singles and plied yarn.

b. Includes an undetermined amount of rayon tire cord and cord fabric.

c. Includes an undetermined amount of noncellulosic tire cord and cord fabric.

d. Includes zero twist yarns.

e. These data are obviously incorrect because of misclassification. Most of these poundages should be included with filament yarn.

SOURCE: U.S.Census Bureau.

NES - Not elsewhere specified.

* These items are not reported by the Census as cellulosic vs. noncellulosic. Any separation between cellulosic and noncellulosic is estimated, based mainly on average declared value.

[a] Also includes 310.0510 & .0610.

[b] Also includes 310.0530, .0550, .0630 & .0650.

[c] Also includes 309.0340, .0365, .0500, .0630, .0640 & .0665.

[d] There may be some acetate yarn in these data, but the Census figures do not permit a segregation.

[e] Also includes 310.1110 & .1114.

[f] Also includes 310.2010 & .2110.

[g] Also includes 310.1150, .1155, .1170, .2030, .2050, .2130 & .2150.

[h] Also includes 310.5005 & .5030.

[i] Also includes 310.4046, .4047, .4050, .5015, .5046, .5047, .5049 & .5051.

[j] Chiefly roving. Also includes 309.9800 & .9900.

SOURCE: U.S.Census Bureau.

NES - Not elsewhere specified.

* These items are not reported by the Census as cellulosic vs. noncellulosic. Any separation between cellulosic and noncellulosic is estimated, based mainly on average declared value.

a. Also includes 310.0510 & .0610.

b. Also includes 310.0530, .0550, .0630 & .0650.

c. Also includes 309.0340, .0365, .0500, .0630, .0640 & .0665.

d. There may be some acetate yarn in these data, but the Census figures do not permit a segregation.

e. Also includes 310.1110 & .1114.

f. Also includes 310.2010 & .2110.

g. Also includes 310.1150, .1155, .1170, .2030, .2050, .2130 & .2150.

h. Also includes 310.5005 & .5030.

i. Also includes 310.4046, .4047, .4050, .5015, .5046, .5047, .5049 & .5051.

j. Chiefly roving. Also includes 309.9800 & .9900.

a. Year-to-date totals except for stock, which is the latest month's data.

b. The monthly production of each fiber may be calculated as total shipments plus a stock increase, or less a stock decrease, over the month.

c. Producers' total domestic plus export shipments.

d. Rayon yarn data are available annually only; see page 21 of the February issue.

e. Data for nylon include aramid.

f. Industrial is defined as 500 denier and coarser with an Instron tenacity of 7 grams or more per denier.

g. Low denier industrial is defined as finer than 500 denier with an Instron tenacity over 5.5 grams per denier.

h. Olefin yarn+monofilaments also includes spunbonded polypropylene and film fiber produced for textile end uses.

i. Saran and spandex data are not included in these totals. See page 21 of the February issue for annual data on these yarns.

j. Acetate staple+tow data are available annually only; see page 21 of the February issue.

Textile Organon

Textile Fiber End Use Survey

Highlights

1981 U.S End Use Summary . . . featured page 214.

Summary of Man-Made Fiber & Semimanufactured Imports 1975-1981 . . . featured page 223.

Third Quarter 1982 Domestic Shipments of Acrylic+ Modacrylic Staple+Tow Fall 11% . . . see page 229.

Exports of Polyester Staple+Tow in Third Quarter 1982 Drop to 26 million pounds, 84% Below Exports in Third Quarter 1981 . . . see page 229.

Presented in this issue of the *Textile Organon* is the latest in a series of surveys of U.S. textile fiber consumption by end use. Annual data are shown for the years 1975 through 1981.

The data of this survey for 1975 and forward supersede those of similar earlier surveys. As more reliable data become available, they are incorporated into the survey to provide the most current industry data obtainable.

Compared with last year's survey, significant revisions have been made in the following Apparel end uses: Sweaters and Related Accessories (Item 8 29) and Craft & Handwork Yarns (Item 57).

There are no significant revisions in the Home Furnishings section, though there are revisions for the following Industrial & Other Consumer-Type end uses: Narrow Fabrics (Item 56c), Sewing Thread (Item 72) and Rope, Cordage, Fishline, Etc. (Item 73).

In some cases, these revisions involved changes in the series of data from 1975 through 1981. Revisions such as these are indicated by a black circle (●). In addition, significant single year revisions are denoted by a small "r".

When the changes described above are kept in mind, the data in this survey may be used in conjunction with earlier issues of the *Textile Organon* as follows:

YEARS	*Textile Organon* ISSUES
1949-1955	November 1961
1956-1959	January 1966
1960-1963	January 1970
1964-1965	November 1971
1966-1967	November 1973
1968-1969	November 1975
1970	November 1976
1971-1972	November & December 1978
1973	November 1980
1974	November 1981

In this manner, a continuous statistical series covering the 33-year span from 1949 through 1981 may be obtained.

ANNOUNCEMENTS

The Textile Economics Bureau is offering a special discount on a limited number of previously bound volumes of the *Textile Organon.*

Instead of the normal $50 per volume charge, 1981 volumes are available for $35, 1980 for $30, 1979-1970 for $15 and 1969 & earlier for $10. 1982 volumes will be available early next year for $50. To order a bound volume of the 1982 *Organon,* your request along with a check for $50 must be in our possession **no later** than December 31, 1982.

In addition, please note that there will be an increase in the price for single issues of the *Textile Organon.*

Effective January 1, 1983, single copies of the June and November issues will cost $20 ($30 for overseas customers) and all other single copies will cost $15 ($20 overseas).

SURVEY FIBER COVERAGE

The objective of this survey is to measure the amount of raw fiber required to produce a particular end use item. The quantities of fiber are grouped under general listings, but specific characteristics of each listing should be noted.

The man-made fiber data are presented in two general categories, Cellulosic, which includes rayon and acetate, and Noncellulosic, which includes nylon, polyester, acrylic, olefin, saran, spandex and textile glass. Except for carpets, no separation of the data by generic type within the end uses is provided. See footnote (b) under General Notes on page 224 for additional descriptions. The cotton end use data cover raw cotton. Cotton waste and cotton linters poundages are excluded, except when pertaining to waste. See the section describing waste fiber coverage for further explanation.

Wool data cover both virgin and reprocessed & reused wool.

Many other fibers, such as silk, linen, jute and sisal, are used in various products covered by the survey, but no poundage data for these fibers are included in the end use tables on pages 216-222. For the purposes of comparison, however, the total imports of these fibers are presented in the lowest table on page 215. Additional reference to these fibers is made in the General Notes on page 224.

SURVEY WASTE FIBER COVERAGE

In the survey, textile fiber waste is handled in three different ways: First, end uses which employ waste fiber, either wholly or in part without preliminary processing, are not included (e.g., furniture stuffing, mattress felts, punched or needled felts for carpet & rug underlays, pressed wool felts and some nonwoven fabrics).

Second, for certain end uses which utilize both new fiber and the fiber derived from processed waste, the poundages shown have been calculated so as to exclude the waste component inasmuch as possible, as, for example, is the case with the cotton waste in Towels & Toweling (Item 48) and Twine (Item 73).

And third, waste which has been processed into usable spinnable fiber is included in the poundages shown for Blankets (Item 46), Carpets & Rugs (Item 50) and a number of other applications. It is important to note that in products such as these, fiber derived from waste by preliminary processing, especially for the man-made fiber poundages, is a significant and measured part of the total end use.

OUTLINE AND COVERAGE OF THE SURVEY

The tabulations presented on pages 216-222 show the poundages of the itemized textile fibers consumed in the production of end use products in the United States.

The substantial imports of finished products, such as apparel, blankets, tablecloths and rugs, are not included in this survey as they are not manufactured in domestic mills.

The method used for estimating the end uses of man-made fibers differs from that used for the natural fibers. For man-made fibers, the data are based on producers' domestic shipments plus imports of fiber, yarn and semimanufactured products. While in the case of cotton, the data of the National Cotton Council were used extensively, and for wool, government data plus estimates from other trade sources were employed.

END USE VERSUS AVAILABLE SUPPLY

Available supply, which is mill consumption plus semimanufactured imports, is compared with end use consumption in the center table on page 215. While more specific reasons which affect the correlation between these series are described in subsequent sections, some general remarks are presented below.

Cotton. End Use consumption is lower than Available supply for most years; the same situation pertains to the National Cotton Council's survey data. Two reasons for this are stated by the Council: a) many small end uses are not included in the survey and b) estimates of materials consumed are based on "typical" cotton yarns and fabrics, not on the actual weights of every type of yarn and fabric consumed in the various end uses.

Timing and inventory changes also play a significant role. For example, some raw cotton correctly reported as "consumed" by the Census Bureau in the calendar year 1980 was not actually incorporated into end products until 1981 because of time lags and inventory fluctuations involved in moving from raw fiber in the bale to a finished garment or other textile product. Similarly, an indeterminate amount of cotton consumed in 1981 was not embodied in finished products until 1982.

As noted, the cotton series presented in this survey are mainly those of the National Cotton Council as published in its annual survey "Cotton Counts Its Customers" (1982 and earlier editions).

Wool. Blends of wool with other fibers are common in many end uses, but little information is available on the fiber composition of these blends. Thus, relatively reliable measures are available mainly on the wool

a. The percentages in these columns show the share of each fiber in the specified end use each year. They add horizontally to the 100% shown in each of the Grand Total columns.

b. The percentages in these columns show the usage of each type of fiber by its major end use categories. They add vertically to the 100% shown under Total End Use Consumption.

poundages used in Home Furnishings (blankets and carpets) and such Apparel items as Retail Piece Goods and Craft Yarns.

These poundages were deducted from the Available Supply in the page 215 table and residual poundages were then attributed to Apparel. Usage in individual apparel items from the years 1975-1981 was calculated by correlating the data of Census reports MA-23A and MQ-22T on, respectively, Apparel and Broad Woven Goods.

Man-Made Fibers. As will be seen, there is relatively good correlation between End Use Consumption and Available Supply.

The fluctuations of producers' domestic shipments, as well as imports, from year to year are significant. In years when there is a large increase in domestic shipments plus imports of fiber (Available Supply), it is probable that some of the increase went into mill and manufacturers' inventories rather than directly into end uses. Both warehouse inventories of yarn and staple

a. Mill Consumption is taken from page 44 of the March 1982 *Organon* issue plus subsequent revisions.

b. Man-Made staple includes waste.

c. Imports are taken from page 45 of the March issue and comprise semimanufactured goods; see the footnotes there.

d. These poundages of reprocessed and reused wool, as well as wool consumed on the cotton spinning system, are not included in the mill consumption series for wool (see page 36 of the February 1970 *Organon*). However, they are considered here as part of the available supply of wool as shown in the table below.

a. Available means mill consumption plus the imports of semimanufactured products - from the table above.

b. End Use from the summary table on page 214.

c. End Use as a percentage of Available.

d. Yarn includes monofilaments.

e. Staple includes tow, fiberfill and waste.

SOURCE: U.S. Census Bureau.

Because these fibers are not grown in the United States (flax production is nominal), imports are taken as the total available supply.

SILK. **Raw material** means raw silk plus silk waste & noils. **Semimanufactured** means spun & thrown silk yarns and silk fabrics. **Finished goods** are mainly scarves, handkerchiefs, blouses and laces.

LINEN. **Raw material** includes hackled and unhackled flax, noils, tow & straw. **Semimanufactured** includes linen yarn, sliver & roving. **Finished goods** are mainly fabrics, handkerchiefs, toweling, napery & dresses.

JUTE. **Raw material** includes unmanufactured jute and jute butts. **Semimanufactured** means yarn & roving, new & waste bagging and burlap in the piece. **Finished goods** are mainly cordage, bags and webbing.

SISAL & OTHERS includes all of the *hard or leaf fibers* (e.g., abaca or manila hemp, coir, crin, henequen, istle or tampico, sisal, etc.) **imported** into the United States plus the *soft or bast fibers* (e.g., hemp, ramie, sunn, etc.) except flax or linen and jute, which are tabulated separately here. **Semimanufactured** is chiefly coir yarns & roving. **Finished goods** are mainly cordage and twine.

NOTES FOR EXPORT ITEMS ABOVE

a. For all lettered and general footnotes to this table, see page 224.

These exports do not duplicate the end use poundages that are reported in Items 1 through 79. Apparel items are not tabulated here because they already have been counted as the fabric was cut, i.e., they are counted only once regardless of the subsequent place of sale or consumer use.

Similarly, fabrics for blankets, sheets, upholstery & draperies, carpets, etc., are excluded since they are measured at the mill level as an end use.

The exports of man-made fiber filament yarn+monofilaments, staple, tow, etc., are not tabulated in this section because these products are not a factor in U.S. mill consumption.

On the other hand, the two export items are recorded because, while they were processed or fabricated in U.S. mills, they were exported before reaching the point at which end use is measured.

These data agree with the corresponding figures on page 45 of the March 1982 *Organon*, as revised.

80. YARN, THREAD, ETC., consists of sliver, tops & roving; plied, thrown and spun yarn; sewing thread and handwork yarns; cotton twine and cordage; and advanced wool.

81. WOVEN & KNIT FABRIC consists of broad & narrow woven fabrics and knit cloth, except that cotton also includes table damask and tire cord & fabric. See footnote 7 on page 45 of the March 1982 *Organon*.

82. TIRE CORD & CORD FABRIC. The data shown in this series in previous *Organon* issues have been incorporated into Item 65, Tires. See footnote 65 on page 226.

SUMMARY OF MAN-MADE FIBER & SEMIMANUFACTURED IMPORTS

MILLION POUNDS

a. Includes grouped filaments.

b. **SOURCE:** U.S. Bureau of the Census.

c. **SOURCE:** *Cotton and Wool Situation,* U.S. Department of Agriculture.

For imports of fiber, the data are taken from the monthly summaries in each *Organon.* A listing of the commodity numbers used may be found on page 233 of this issue under the monthly import table.

(Continued from page 214)

and goods-in-process inventories would be involved. For example, it is likely that some of the large increase in the Available Supply between 1976 and 1977 was absorbed in inventories at various stages of the production process. In a period when Available Supply falls sharply (1973-1974 and 1974-1975, for instance) the movement is reversed. In a period of slower activity, mills and manufacturers reduce their warehouse inventories and work-in-process to reflect the lower level of activity.

UNIT PRODUCTION VERSUS FIBER CONSUMED

This survey shows the poundage of raw fiber which had to be put into process in order to manufacture end products. No direct comparison can be, or should be, made between the poundages of the fibers consumed, as recorded in the survey, and the finished or "shelf" weight of those end products by fiber.

Two reasons for this disparity are:

(Continued on page 227)

GENERAL NOTES FOR THE END USE TABLES ON PAGES 216-222

Units are in million pounds.

c. Means less than 50,000 pounds, i.e., nominal.

-- Means that little, or none, of the fiber is used.

* When an asterisk appears, there is a footnote at the end of the table.

• Means a significant revision in the 1975-1981 data series compared with the corresponding data shown in the November 1981 *Organon* issue. Earlier years' data on the new basis are not available.

a. This letter in the title of each table refers the reader to these notes.

b. Man-made fiber end use in these tables is divided between Cellulosic (rayon+acetate fibers) and Noncellulosic (nylon, polyester, acrylic, olefin, saran, spandex and textile glass fiber). Yarn includes monofilaments and olefin "yarn" also includes film fiber and spunbonded polypropylene. Staple includes tow & fiberfill; see Item 79a, Fiberfill, Stuffing & Flock and its footnote on page 226. All textile glass fiber is tabulated as yarn. Certain waste poundages, which are tabulated with staple, are included; see text on page 213.

The noncellulosic fibers included in this survey, for one or more years, are the acrylic, aramid, modacrylic, nylon, olefin (polyethylene & polypropylene), polyester, saran, spandex and vinyon fibers.

d. The staple data are tabulated in the yarn column.

e. The yarn data are tabulated in the staple column.

r. This datum shows a significant revision compared with the November 1981 *Organon* data.

When textile glass fiber is included in an end use, the word "Glass" appears in the lower left corner of the end use box, together with the annual consumption data for 1975-1981. These glass fiber poundages are included with noncellulosic yarn in that end use and in the section totals.

When silk, linen, jute, sisal, etc., are consumed in an end use, in addition to cotton, wool and the man-made fibers, the fiber is named in the middle left of the end use box. But no poundage data for such fibers are included in either such end use or in the section totals.

As described in the footnotes to Items 54a and 54b below, apparel linings, pockets and such are tabulated in Items 54a and 54b and not with the applicable garments.

In the Apparel table, the sex and age classifications used are those of the U.S. Census Bureau. Thus **M** means Men's plus Boys' and **W** means all other persons, i.e., Women's, Misses', Juniors', Girls', Children's & Infants'.

NOTES FOR APPAREL ITEMS (PAGES 216-217)[a]

a. For all lettered and general footnotes to this table, see notes above.

40. SHEER HOSIERY (W) includes full-fashioned & seamless full-length, pantyhose, knee-highs and surgical hosiery. Bodywear is in Items 35-39.

19-41. ANKLETS & SOCKS (MW) includes men's and women's foot socks, anklets and nonsheer knee-high hose. Also includes men's midcalf and surgical hose.

8-29. SWEATERS (MW) includes knitted sweater shirts, coats, jackets and related accessories. Also note Item 57.

57. CRAFT & HANDWORK YARNS includes yarn and thread for crocheting, darning, embroidery, mending, hand knitting, etc. The item does not include sewing thread (Item 72). Olefin yarn for macramé is in Miscellaneous Industrial.

16-18. UNDERWEAR & NIGHTWEAR (M) includes undershirts, shorts & briefs, sleep coats, pajamas, nightshirts, thermal underwear, etc.

35-39. UNDERWEAR, NIGHTWEAR, BRAS AND FOUNDATIONS. The underwear and nightwear component includes full and half-slips, panties, pettipants, camisoles, vests, briefs and thermal underwear as well as nightgowns, sleep & lounging pajamas, sleep coats, peignoir & robe sets with nightgowns or pajamas, negligees and bedjackets. Includes bodywear and all children's and infants' underwear & nightwear. **Excludes** the trim, elastic webbing, apparel lace, braid or narrow fabric used in these products.

The bras and foundations component includes bandeaux, corsets & girdles, combination & one-piece garments, garter belts, two-way stretch and surgical & maternity foundation garments.

10-31. ROBES & LOUNGEWEAR (MW) includes men's & boys' beach- & bathrobes, dressing gowns and smoking jackets; and women's beach- & bathrobes and housecoats.

54a. HIGH PILE FABRICS includes all applications (Apparel, Home Furnishings and Industrial). Apparel shell fabrics and "surface lining" garment items are included.

54b. FABRICS FOR LINING includes all man-made fiber types except high pile fabrics (Item 54a), lining-type fabrics sold as retail piece goods (see Item 55) and the lining components of shoes & slippers and luggage and handbags (Miscellaneous Other Consumer-Type). The apparel lining component of this series includes main linings, interlinings, zip-in linings (except pile), linings for pockets and waistbands as well as the acetate and nylon tricot used for laminating. Cotton drapery linings are not included here but are in Item 52. Also not included are interlinings of haircloth, urethane and nonwoven fabrics.

43. APPAREL LACE includes nets and veilings.

55. RETAIL PIECE GOODS are mainly women's apparel-type fabrics but all other types of apparel fabrics are included in addition to fabrics destined for apparel linings and home furnishings application.

56a. NARROW FABRICS includes **ELASTIC AND NONELASTIC TYPES.** The "narrow woven goods" made by slicing thermoplastic fiber broad woven fabrics with a hot knife to produce fused-edge narrow fabrics are not included here. **NARROW FABRIC** poundages for home furnishings and industrial uses are shown in those sections.

TOPWEIGHT FABRICS includes all shirts, blouses, lightweight dress and other lightweight fabrics. The fabrics generally weigh 5.0 ounces or less per square yard. Retail piece goods are in Item 55.

BOTTOMWEIGHT FABRICS includes pants, sportswear, tailored clothing, career apparel and other heavier weight fabrics. The fabrics generally weigh more than 5.0 ounces per square yard. Retail piece goods are in Item 55.

OTHER APPAREL includes men's & women's work gloves and handkerchiefs. Man-made fiber used for knitted accessories such as scarves, mufflers, gloves, caps, etc., is in Items 8 & 29.

NOTES FOR HOME FURNISHING ITEMS (PAGES 218-219)[a]

a. For all lettered and general footnotes to this table, see page 224.

HOME FURNISHINGS. These data cover the use of each item not only in homes, but also in offices, hotels, institutions, etc. For certain transportation uses, note Items 50a, 63 & 64.

None of the poundages tabulated include any cotton stuffing or filling materials in items such as furniture, pillows, mattresses, comforters & quilts, sleeping bags, seat padding, etc. For the man-made fibers, however, stuffing & fiberfill is tabulated in the Industrial section. Note text page 213 regarding the inclusion of certain man-made fiber waste poundages here. Certain felt poundages are in Item 70.

45. BEDSPREADS includes tailored & throw spreads, both tufted & woven, as well as the backing. **QUILTS** includes comforters and their outer shell; quilted pads are in Item 47.

46. BLANKETS & BLANKETING includes woven, knitted, needle-punched and flocked full-size and crib blankets and electric blanket shells, as well as the woven acetate or nylon filament yarn bindings thereof. Sizable poundages of rayon, acrylic, nylon & wool waste are included here.

47. SHEETS includes pillowcases. **OTHER BEDDING** includes the outside cover of quilted pads, mattress pads, mattresses & innersprings, civilian cots and sleeping bags. Mattress felts are in Item 70. The man-made staple poundages here are mainly polyester for sheets and rayon & polyester for bed ticking. The man-made filament is chiefly polyester for bed ticking

48. TOWELS & TOWELING includes woven hand, bath, dish towels, etc. Nonwoven towels, such as "Handi-wipes" and industrial wiping cloths, are in Item 61. The large cotton waste poundage used in these products is not included.

56b. NARROW FABRICS includes only home furnishings applications. See the Apparel and Industrial sections for Narrow Fabrics in those applications.

50. CARPETS & RUGS (TOTAL) is the sum of 50a & 50b.

50a. FACE YARNS. The data include tufted, woven, knitted and needle-punched types. Tufted includes broadloom & roll goods, transportation carpeting, scatter rugs, bath mats and "grass." Woven includes carpets such as Axminster, Velvet, Wilton, etc. Knit goods are mainly scatter rugs. Needle-punched are the indoor-outdoor carpets. Item 50a does not include braided, hooked or woven twisted paper carpets.

By-fiber detail on the poundage of fibers used in carpet face yarns is given in the table below.

50b. CARPET BACKING FIBERS. The Cellulosic Yarn is industrial rayon used for woven carpet chain warps. The Other Yarn is olefin (monofil+film fiber+spunbonded) and small poundages of nylon & polyester filament yarn. The Other Staple is olefin only.

The substantial poundages of jute used as woven primary & secondary carpet backing, as well as the jute yarn used in the warp of woven carpets, are not tabulated in Item 50b. Nor does it include the poundages of wool, hair and jute used in carpet and rug pads and cushions.

51. CURTAINS includes lace and other types (principally woven), i.e., cafe, tiered & cottage; ruffled; shortie drapes and tailored. Shower curtains are in Other Home Furnishings.

52. DRAPERY & UPHOLSTERY includes furniture slipcovers and vinyl-coated cotton fabrics for upholstery.The olefin & saran webbing for outdoor furniture is included under Narrow Woven Industrial (Item 56c). Also includes the backing & headers of drapery fabrics. The cotton data include cotton drapery linings.

OTHER HOME FURNISHINGS includes woven & lace napery, such as tablecloths & napkins, doilies, etc., as well as the cotton in window shades. For the man-made fibers, it includes insect screening & netting. Wall-covering fabric is in Miscellaneous Industrial.

NOTES FOR INDUSTRIAL & OTHER CONSUMER-TYPE ITEMS (PAGES 220-221)[a]

a. For all lettered and general footnotes to this table, see page 224.

56c. NARROW FABRICS here includes woven labels, industrial webbing, shoelaces, tapes (venetian blinds & industrial), transportation seat belts, auto windlace, channeling & trim, and outdoor furniture webs. These figures exclude transmission & conveyor belting (in Item 67); friction tape and the braided narrow fabric used in electrical applications (in Item 69); and gummed cotton tape (in Item 76).

61. MEDICAL, SURGICAL & SANITARY includes bandages, gauzes, adhesive tapes & plasters, sanitary napkins & tampons, cotton diapers, rayon disposable diapers, surgical gowns and packs. Medical sutures are tabulated in Item 72. Surgical hosiery is in Items 19 & 40. Not included here is cotton waste & linters nor any nontextiles used for filling materials.

63 & 64. TRANSPORTATION FABRIC includes auto seat upholstery & slipcovers, sidewall, headlining (except textile glass in Item 77) and sheeting. The cotton poundages include the knit and woven fabric used as the backing for vinyl sheeting. The item includes convertible auto tops & replacements thereof, as well as upholstery used in other kinds of transportation, such as airplanes, railroad & subway cars, buses, etc. It does not include seat padding, transportation rugs (in Item 50), window channeling (in Item 56c), flocking, tassels, trim, etc., or the textile glass fiber used in reinforced plastic seating for subways, buses, etc. (in Item 77). Starting in 1978, the man-made fiber used for substrates for automotive fabric is included in Item 75.

65. TIRES includes all types, i.e., automobile, truck, tractor, off-road, bicycle, etc. The data include tire cord & tire cord fabric, chafer and other tire components, i.e., flipper fabric, breaker strips, bead wraps, etc.

The data include imports of tire yarn, cord & fabric and also cover any poundages subsequently exported in cord or fabric form. The glass figures represent uncoated yarns.

The consumption of steel tire cord for the years 1975-1981 inclusive is estimated as follows: 117.5, 140.0, 182.0, 182.0, 180.0, 142.0 & 154.3. However, these poundages are **not included** in Item 65 above.

66. HOSE includes fire, chemical, fuel, etc. Does not include braided vacuum cleaner hose.

67. BELTING includes flat conveyor & transmission belts (both rubberized and nonrubberized) and V-belts.

69 & 77. ELECTRICAL APPLICATIONS & REINFORCED PLASTICS. The cotton poundages are estimated.

Electrical Applications includes electric wire insulation & covering of all kinds plus friction tape and cable wrap, stuffing & identification. The total fiber consumed does not reflect the increased use of plastic and other nonfibrous coatings, of course.

Reinforced Plastics means high- and low-pressure laminates used in the manufacture of construction materials (corrugated & flat sheet, plumbing accessories, etc.), process equipment (tanks & containers, pipes, ducts, etc.), transportation uses (aircraft, autos, trucks, etc.), and marine, missiles, molded electrical parts, housing, seating, trays, etc. Flexible laminates of cotton are tabulated by end use, e.g., vinyl-supported upholstery fabric in Item 63, etc.

70. FELTS includes wet & dry papermakers' felts, mattress felts and cushioning & wicking felts. Apparel felts (e.g., for shirts) are classified by apparel products. Patio and similar "felts" are in Item 50a. Laundry press pads and flatwork ironer pads are in Miscellaneous Industrial. The wool poundage includes some felts used in filtration (recorded here and not in Item 71), but excludes the substantial amounts used in pressed felts.

71. FILTRATION includes woven and nonwoven filters for wet & dry filtration, including tea bags. The small wool poundage used in the copper refining industry is included in Item 70.

The fiber used in cigarette filtration is **not included** in this end use or in the Industrial Uses totals.

72. SEWING THREAD includes home sewing and industrial & weight goods, as well as medical sutures.

73. ROPE (braided & twisted), **CORDAGE** (under 3/16"), **FISHLINE, ETC.**, includes hawsers, baler or harvest twine, clothesline, tying twine, etc., as well as fishnets, seines & netting twine.

74. BAGS & BAGGING. The man-made Other Yarn is nylon mailbags plus olefin leno mesh & close-woven bags, including sandbags; also includes olefin bagging for wool bales. Carpet backing bale wrap is in Other Industrial.

75. COATED & PROTECTIVE FABRICS includes, for the man-made fibers, tents & tarpaulins, as well as the substrates for vinyl, rubber or urethane coating, lamination or impregnation. Examples of specific end uses covered include parachutes, deceleration chutes & tow targets; awnings; beach, garden & tractor umbrellas; inflatable dunnage & cushions; air-supported structures & automotive air-spring diaphragms and boat & pool covers.

The cotton poundages include awnings, boat covers, tarpaulins and tents. **Not included** here are the cotton poundages used for vinyl substrates; such poundages are tabulated with their appropriate end use, i.e., transportation upholstery (Items 63 & 64), upholstery (Item 52), etc. Man-made fiber surfaces for recreational fields are not included in this survey.

76. PAPER & TAPE REINFORCING includes gummed and pressure-sensitive tape, as well as nonwoven bonded structures for paper, tape and ribbon reinforcing.

79a. FIBERFILL, STUFFING & FLOCK includes all applications (apparel, home furnishings & industrial). Both graded fiber and waste are included. The consumption of polyester staple & tow in fiberfill for the years 1975-1981 inclusive was: 138.7, 153.1, 176.9, 199.2, 240.8, 206.1 & 228.3. For the same years, use of polyester waste for stuffing and filling materials was: 42.3, 54.6, 59.1, 41.5, 45.4, 24.0 & 20.7.

79b. UNALLOCATED NONWOVENS means all nonwoven poundages remaining after the identifiable nonwoven end uses, such as medical, surgical & sanitary; filtration; coated & protective fabrics; and paper & tape reinforcing, have been calculated.

MISCELLANEOUS INDUSTRIAL & OTHER CONSUMER-TYPE PRODUCTS includes the cotton for abrasives; book binding; luggage & handbags; shoes & slippers; tobacco cloth; woven wiping cloths and wall-covering fabrics. For rayon, it includes asbestos carrier fiber, laundry supplies and mop yarns. For olefin yarn, it includes agricultural cloth, bale wrap, cable binding, civil engineering fabrics and macramé and other craft yarns.

Also included under Other Yarn are the substantial poundages of textile glass fiber not allocated elsewhere, particularly the poundages used in the manufacture of roofing shingles, built-up roofing and wallboard & plaster.

For data corrections, see errata insert.

SOURCE: U.S. Census Bureau.

a. Includes thrown, singles and plied yarn.

b. Includes an undetermined amount of rayon tire cord and cord fabric.

c. Includes an undetermined amount of noncellulosic tire cord and cord fabric.

d. Includes zero twist yarns.

e. These data are obviously incorrect because of misclassification. Most of these poundages should be included with filament yarn.

(Continued from page 223)

1. The variation in the weight per square yard of fabric made of the different fibers for the same end use. According to recent data collected by the U.S. Census Bureau, cotton fabrics averaged 7.0 square yards per pound and wool 0.6 square yards per pound. But for man-made fiber, 100% filament yarn fabrics averaged 4.4 square yards per pound and spun yarn fabrics averaged 3.3 square yards per pound.

2. From these data, it is apparent that the "covering power" of fabrics made from the various fibers varies greatly. Hence, a simple comparison of poundages of fibers consumed would be misleading both because of the differences in fibers concerning covering power and the difference in typical fabric weights of products made of the various fibers, as described.

LIMITATIONS OF THE SURVEY RESULTS

The statistical results of an end use survey can be only approximations at best. But when the data are viewed as one fiber relative to another, and not as absolute values, then they may be regarded as measuring the long-term trend results of competition between the fibers.

An additional note, the data are given in millions of pounds and include one decimal place to show hundred thousand pounds. This device is employed not to show great accuracy, but rather to take into account some small poundages of fibers in such end uses as Apparel Lace (Item 43) and still allow the compilation to add arithmetically.

OCTOBER *Organon* CORRECTION

On page 197 of the October ***Organon***, the 6-month 1982 wool manufactures import figure should be 51,332, not 21,759. Thus, the import balance should be 44,792, not 15,219.

FOOTNOTES FOR TABLE ABOVE & OPPOSITE

"Imports" are imports for consumption, as reported by the U.S. Census Bureau.

a. Data for rayon and "Other" non-cellulosic yarns (chiefly saran & spandex) are available annually only; see pages 20 & 21 of the February issue for further details on these yarns.

b. Olefin Yarn+Monofilament data also include film fiber as well as spunbonded polypropylene.

c. Yarn imports include singles and plied.

d. Acetate staple+tow data are available annually only; see pages 20 & 21 of the February issue for further details.

e. These figures are composites of the nylon, acrylic+modacrylic, polyester and olefin staple imports, i.e., Commodity Numbers 309.4338, .4342, .4345 & .4346.

SOURCE: U.S.Census Bureau.

NES - Not elsewhere specified.

* These items are not reported by the Census as cellulosic vs. noncellulosic. Any separation between cellulosic and noncellulosic is estimated, based mainly on average declared value.

a. Also includes 310.0510 & .0610.

b. Also includes 310.0530, .0550, .0630 & .0650.

c. Also includes 309.0340, .0365, .0500, .0630, .0640 & .0665.

d. There may be some acetate yarn in these data, but the Census figures do not permit a segregation.

e. Also includes 310.1110 & .1114.

f. Also includes 310.2010 & .2110.

g. Also includes 310.1150, .1155, .1170, .2030, .2050, .2130 & .2150.

h. Also includes 310.5005 & .5030.

i. Also includes 310.4046, .4047, .4050, .5015, .5046, .5047, .5049 & .5051.

j. Chiefly roving. Also includes 309.9800 & .9900.

a. Year-to-date totals except for stock, which is the latest month's data.

b. The monthly production of each fiber may be calculated as total shipments plus a stock increase, or less a stock decrease, over the month.

c. Producers' total domestic plus export shipments.

d. Rayon yarn data are available annually only; see page 21 of the February issue.

e. Data for nylon include aramid.

f. Industrial is defined as 500 denier and coarser with an Instron tenacity of 7 grams or more per denier.

g. Low denier industrial is defined as finer than 500 denier with an Instron tenacity over 5.5 grams per denier.

h. Olefin yarn+monofilaments also includes spunbonded polypropylene and film fiber produced for textile end uses.

i. Saran and spandex data are not included in these totals. See page 21 of the February issue for annual data on these yarns.

j. Acetate staple+tow data are available annually only; see page 21 of the February issue.

Dear *Textile Organon* Subscribers:

A major last minute revision in U.S. Exports of Man-Made Fibers, page 227, of the November 1982 ***Textile Organon*** necessitates the issuance of a revised table. Please incorporate the attached revision in your records. The revised table of U.S. Exports of Man-Made Fibers will also appear in the December 1982 issue of the ***Textile Organon***.

Sincerely,

Raymond S. Savadge
President

SOURCE: U.S. Census Bureau.

a. Includes thrown, singles and plied yarn.

b. Includes an undetermined amount of rayon tire cord and cord fabric.

c. Includes an undetermined amount of noncellulosic tire cord and cord fabric.

d. Includes zero twist yarns.

e. These data are obviously incorrect because of misclassification. Most of these poundages should be included with filament yarn.

MONTHLY REVIEW

Highlights

1981 Man-Made Fiber Production, Import, Export & Net Available Supply By Country in Millions of Pounds . . . featured page 243.

Third Quarter Domestic Shipments of Filament Yarn Fell to the Lowest Level in Years . . . see page 244.

Third Quarter Domestic Shipments of Nylon Staple+ Tow to the Carpet Trades Rose to 165.5 Million Pounds . . . see page 245.

Textile Organon Special Report: World Natural Fiber Review . . . see pages 237-242.

Nylon yarn shipments to the carpet trades rose in November, as did shipments of both nylon textile and industrial yarn - each to near record highs for this year.

Shipments of polyester textile yarn rebounded from a weak October, but shipments of polyester industrial yarn fell to the lowest level since July.

Olefin yarn+monofilament shipments rose in November, though shipments of olefin+vinyon staple+ tow fell to the lowest level since July.

Shipments of both nylon and acrylic+modacrylic staple+tow rose in November, as the shipment level of acrylic+modacrylic rose to the highest level since August.

After a midyear slump, shipments of polyester staple+tow have risen dramatically, with November's level being the highest recorded since March.

IMPORTS, EXPORTS & BALANCE

The 1981 by-country production, import, export and net available or retained supply of four categories of man-made fiber are presented in millions of pounds on page 243.

In the table, "yarn" includes tire cord and tire cord fabric, filament yarn and monofilaments. Staple includes tow, fiberfill and tops. Spun yarn includes advanced waste. Unprocessed waste is not included.

In a few cases where a country's import or export data could not be accurately separated as cellulosic versus noncellulosic, a division was estimated.

Except for spun yarn imports and exports, imports and exports of manufactured and semimanufactured man-made fiber products (e.g., fabric dresses, hosiery, etc.) are not included in the data.

The table shows the net import-export tonnage of spun yarn under the "Total Man-Made Fiber" columns; space does not permit the presentation of import and export data separately.

SPECIAL REPORT

World Natural Fiber Review

Editor's Note--This is the second in a series of periodic reports scheduled to appear in the Textile Organon. The first, "The Impact of Exports," was published in the August 1982 issue.

The purpose of this report is to provide the reader with a single source of worldwide and regional raw cotton and wool production data for easy reference. Traditionally, these data appeared in the October (cotton) and December (wool) issues of the Organon.

Still another reason for publishing this report is to compare and analyze the production of natural fibers with man-made fibers on a worldwide and regional basis. To accomplish this, a 10-year history of raw cotton and wool production was compiled. These data were then compared with the production of man-made fibers for the years 1971, 1976 and 1981. The results indicate that, over the 10-year period, man-made fibers gained market share at the expense of natural fibers in every region analyzed. However, since 1976, the growth of man-made fibers in the developed regions, the U.S.A. and Western Europe, has slowed and market share actually declined in those areas.

SOURCE: International Cotton Advisory Committee.

For earlier years' data, see the October 1960 and 1969 ORGANON issues, pages 167 & 176.

a. Bales of 478 pounds, except running bales for the United States through 1971.

b. **PRODUCTION** means actual ginnings or pressings during the August-July season. In some countries, unpressed cotton and estimates of production for household consumption and for delivery to mills are included. U.S. production also includes the city crop, etc. Note that U.S. production shown in the table on page 241 includes only the ginnings within the crop year shown.

c. **CONSUMPTION** includes raw cotton consumed in spinning mills and other factories plus estimates of household consumption.

d. **EXPORT** means the export of domestically produced cotton.

e. **CARRYOVER** includes mill stocks, port stocks and stocks in transit, etc. **U.S.A.** means the carryover of U.S. cotton in the world regardless of where located; **FOREIGN** means the carryover of foreign cotton in the world regardless of location.

f. Five-year averages.

g. The 1981 & 1982 data are preliminary.

SOURCE: International Cotton Advisory Committee.

a. See footnote (a) on the opposite page.

b. Other North America baleages are principally from El Salvador, Guatemala & Nicaragua.

c. Other South America baleages are principally from Argentina, Colombia, Paraguay & Peru.

d. U.S.S.R. figures include nominal baleages for Albania & Bulgaria.

e. The 1981 and 1982 data are preliminary.

f. West Europe baleages are principally from Greece & Spain.

g. Other Asia & Oceania baleages are chiefly from Australia, Iran, Israel & Syria.

h. Other Africa baleages are principally from Angola, Chad, Mozambique, Nigeria, South Africa, Tanzania, Uganda, Zaire & Zimbabwe.

SOURCES: U.S. Census Bureau, *Current Industrial Report M22-P, USDA Cotton and Wool Situation*, and the New York Cotton Exchange Service Bureau.

For earlier years' data, see page 178 of the October 1967 ***Organon*** and page 158 of the October 1978 issue.

a. Foreign imports in equivalent 500-pound bales.

b. 1982 data estimated except for beginning stock.

c. Total ginnings within the crop year shown. Note that U.S. production given in the world tables on pages 237and 238 also includes city crop, etc.

d. City crop consists of rebaled samples and pickings from cotton damaged by fire and weather (partially estimated).

e. The Census Bureau's difference between supply and distribution resulting from baleage destroyed, cotton in transit, etc.

f. Loan and pooled cotton under CCC and earlier programs.

g. Included in city crop above.

h. Preliminary data, subject to revision.

SOURCE: The Commonwealth Secretariat (London).

a. Apparel plus carpet class shorn wool, as well as pulled wool and wool on skins, mostly at the shorn equivalent.

b. Calendar years for Northern Hemisphere nations; season beginning July first or October first for Southern Hemisphere countries.

c. Excludes Lesotho and South West Africa.

d. Includes U.S.S.R. & Romania only in 1945 and prior years. For 1946 forward, Albania, Bulgaria, People's Republic of China, Czechoslovakia, East Germany, Hungary, Outer Mongolia & Tibet, Poland and Yugoslavia are also included.

e. Also includes China and Eastern European countries, except U.S.S.R. & Romania, in 1945 and prior years.

f. Five-year averages.

g. Preliminary estimates.

a. Calendar years.

b. Agrees with ***Organon's*** Selected U.S. Monthly Textile Fiber Data table.

c. Raw wool consumed on the cotton spinning system.

d. Tops includes advanced wool.

e. Includes pile fabrics & manufactures, blankets, tapestry & upholstery, press & billiard cloths, car robes, etc.

f. Includes knit fabrics in the piece and miscellaneous manufactures not elsewhere specified.

g. March ***Organon*** page 45 or as revised later.

a. Filament yarn plus monofilament shipments by primary trade or end use; olefin includes spunbonded polypropylene but does not include spunbonded polyethylene.

b. Small poundages of polyester are included in All Other.

c. Small poundages of olefin are included in All Other.

d. Small poundages of nylon and polyester are included in All Other.

e. Other Broad Woven except carpets, tire fabric, flat belting, etc. The olefin poundages include other home furnishings applications only, i.e., industrial applications are in All Other.

f. Narrow Woven includes apparel ribbons and braids, auto seat belts and/or furniture webbing.

g. Small poundages of olefin are included in All Other.

h. All Other includes sewing thread and other industrial applications. The olefin poundages include sliver knit backing. Also includes indirect exports starting 1st Quarter 1980.

i. These poundages are included in the Total Domestic area above.

* These items are not reported by the Census as cellulosic vs. noncellulosic. Any separation between cellulosic and noncellulosic is estimated, based mainly on average declared value.

a. Also includes 310.0510 & .0610.

b. Also includes 310.0530, .0550, .0630 & .0650.

c. Also includes 309.0340, .0365, .0500, .0630, .0640 & .0665.

d. There may be some acetate yarn in these data, but the Census figures do not permit a segregation.

e. Also includes 310.1110 & .1114.

f. Also includes 310.2010 & .2110.

g. Also includes 310.1150, .1155, .1170, .2030, .2050, .2130 & .2150.

h. Also includes 310.5005 & .5030.

i. Also includes 310.4046, .4047, .4050, .5015, .5046, .5047, .5049 & .5051.

j. Chiefly roving. Also includes 309.9800 & .9900.

a. The noncellulosic fibers included are those listed in the September ***Organon*** issues each year. Yarn+mono includes olefin film fiber and spunbonded polypropylene. Staple+tow includes fiberfill.

b. The acetate production and producing capacity data include diacetate and triacetate. The acetate staple+tow data do not include the large poundages for cigarette filtration.

c. Textile glass fiber, all types.

d. Grand Total Yarn means the yarn+mono shown **plus** all textile glass fiber.

e. Actual producing capacity as of the date shown.

f. Future producing capacity planned for certain dates as of November 1982.

IND means industrial yarn and monofil, i.e., 500 denier & coarser, with an Instron tenacity of 7 grams per denier or more; **CARP** means bulked continuous filament yarn for carpets; **TEXTILE** means yarn & monofil for other (textile) applications. Low denier industrial yarn is tabulated here also.

a. Olefin includes polyethylene & polypropylene. Not included here are data on spunbonded polyethylene, monofilament bristles, film fiber used for decorative or tying ribbons, etc.

b. Olefin monofil includes the circular and rectangular (ribbon) cross sections plus spunbonded polypropylene. Olefin film fiber includes slit and split or fibrillated fiber.

c. Other yarn & monofil is chiefly saran and spandex. Aramid data are included with nylon.

d. Actual producing capacity as of date shown.

e. Future producing capacity planned for certain & dates as of November 1982.

U.S. MAN-MADE FIBER PRODUCING CAPACITY

Last month, the U.S. man-made fiber producing industry had the capacity to produce 11,977 million pounds of fiber per year. This was a decrease of 1½% from the capacity in place one year ago. However, capacity is planned to increase 3½% by November 1984 to 12,406 million pounds.

Cellulosic fiber capacity is expected to change very little over the next two years. Current capacity of 895 million pounds is planned to remain at that level through November 1984.

Noncellulosic fiber capacity is slated for an increase of 4%, or 407 million pounds, over the next two years.

SURVEY COVERAGE & DEFINITIONS

The survey figures shown in the page 248 table cover the man-made fibers in all their primary forms, i.e., filament yarn, monofilaments, polypropylene spunbonded and film fiber are tabulated as filament yarn, while staple, tow and fiberfill are tabulated as staple. The glass fiber data cover all primary forms of that fiber (yarn & strand, staple yarn & sliver, roving & cake, chopped & milled fiber and mat) although only an aggregate figure is published to avoid disclosure of individual company data. The textile glass data are included with the filament yarn totals. The "capacity" to produce waste is ***not*** included in this survey.

Capacity is based on the current and projected "mix" of deniers, filament counts, packages, etc. It is ***emphasized*** that all figures refer to ***current and planned*** capacity. ***They are not to be interpreted as a production forecast.***

Under the survey definitions, all productive equipment which is currently, or is planned to be, in operable condition is counted as capacity, regardless of whether it is actually producing fiber at the time the capacity measurement is taken. On the other hand, equipment which is definitely scheduled for scrapping, or which has been scrapped since the last survey, is excluded from the capacity tabulation. Put another way, the capacity data reflect ***potential,*** rather than ***operating,*** capacity.

SOURCE: U.S. Census Bureau.

a. Includes thrown, singles and plied yarn.

b. Includes an undetermined amount of rayon tire cord and cord fabric.

c. Includes an undetermined amount of noncellulosic tire cord and cord fabric.

d. Includes zero twist yarns.

e. These data are obviously incorrect because of misclassification. Most of these poundages should be included with filament yarn.

f. Third Quarter 1982 data are revised.

a. Year-to-date totals except for stock, which is the latest month's data.

b. The monthly production of each fiber may be calculated as total shipments plus a stock increase, or less a stock decrease, over the month.

c. Producers' total domestic plus export shipments.

d. Rayon yarn data are available annually only; see page 21 of the February issue.

e. Data for nylon include aramid.

f. Industrial is defined as 500 denier and coarser with an Instron tenacity of 7 grams or more per denier.

g. Low denier industrial is defined as finer than 500 denier with an Instron tenacity over 5.5 grams per denier.

h. Olefin yarn+monofilaments also includes spunbonded polypropylene and film fiber produced for textile end uses.

i. Saran and spandex data are not included in these totals. See page 21 of the February issue for annual data on these yarns.

j. Acetate staple+tow data are available annually only; see page 21 of the February issue.

ANNUAL INDEX - VOLUME FIFTY-THREE

The names of U.S. producers of the man-made fibers, together with the products made, are listed on pages 185-190. The corresponding list of world producers is on pages 114-129. Individual producers' names are not shown in this index unless there have been news items concerning them during the year.

Monthly U.S. fiber shipments, stock, etc., are shown in the table "Selected U.S. Monthly Textile Fiber Data," which is usually found on the last page of each ***Organon*** issue. In the following index, this is called the "Monthly Table."

Each issue of the ***Organon*** contains one or more principal topics, e.g., the Directory of World Man-Made Fiber Producers in June. Following is a brief outline of major subjects covered in the 1982 issues. The numbers in parentheses are the pages of each month's issue.

JANUARY	Broad Woven Goods Production (in Both Square & Linear Yards). (1-16)
FEBRUARY	Annual Review of the U.S. Man-Made Fiber Producing Industry. Broad Woven Goods Production. Quarterly U.S. Man-Made Fiber Review. (17-40)
MARCH	U.S. Textile Fiber Consumption (Mill, Domestic & Per Capita). (41-64)
APRIL	Annual U.S. Man-Made Fiber Import-Export Review. Broad Woven Goods Production. (65-88)
MAY	Quarterly U.S. Man-Made Fiber Review. Producing Capacity of the U.S Man-Made Fiber Industry. (89-104)
JUNE	World Man-Made Fiber Survey. Directory of World Man-Made Fiber Producers. Also see pages 137-144, 147-154. (105-136)
JUNE SUPPLEMENT	1981 World Man-Made Fiber Survey. (137-144)
JULY	World Man-Made Fiber Data in Pounds. (145-160)
AUGUST	Quarterly U.S. Man-Made Fiber Review. The Impact of Exports. (161-180)
SEPTEMBER	Directory of U.S Man-Made Fiber Producers. (181-194)
OCTOBER	First Half Man-Made Fiber Import-Export Review. Broad Woven Goods Production. (195-210)
NOVEMBER	Textile Fiber End Use Survey. Quarterly U.S. Man-Made Fiber Review. (211-234)
DECEMBER	World Natural Fiber Review. Producing Capacity of the U.S. Man-Made Fiber Industry. (235-251)

MONTHLY REVIEW

Highlights

Total Shipments of Noncellulosic Staple+Tow Fell by 18% in 1982 . . . see page 2.

Polyester Staple+Tow Shipments Were off 25% in 1982 . . . see page 2.

Third Quarter 1982 Imports of Man-Made Fiber & Manufactures Increased to 108.9 Million Pounds . . . see page 9.

Broad Weaving Industry Data for Second Quarter 1982 . . . featured pages 10-13.

Textile Organon *Special Report: Capacity Utilization Review . . . begins page 3.*

Nylon yarn shipments to the carpet trades rose for the second straight month, although shipments of nylon textile and industrial yarn fell in December.

Shipments of polyester textile yarn fell to the lowest level since July. Shipments of polyester industrial yarn dropped to one of the lowest levels of the year.

Olefin yarn+monofilament shipments rose in December to the highest level since August, though shipments of olefin+vinyon staple+tow fell to the lowest level since April.

Shipments of both nylon and acrylic+modacrylic staple+tow fell to the lowest levels since July.

After a strong November, shipments of polyester staple+tow fell to the lowest point since July.

(see Yearly Review on page 2)

SPECIAL REPORT

Capacity Utilization Review

Editor's Note--With this Special Report, the ***Textile Organon*** *continues its policy of presenting fiber information in a way that highlights significant trends in the U.S. man-made fiber industry. This issue features production, producing capacity and capacity utilization in the industry from 1970 to 1982.*

During this period, several notable trends surfaced. The more significant were the growth of textile glass production from 1970 (an increase of 123% by 1981) and the decline of cellulosic fiber production (a decrease of 44% by 1981). Yet, cellulosic fibers maintained a capacity utilization rate of at least 80% for most years, while the textile glass fiber capacity utilization rate for many years plunges below the 80% level and, in 1980, was as low as 59%.

Noncellulosic fibers exhibited a relatively stable utilization rate, for most years in the 70-80% range. It should be noted, however, that 1982, at 69%, represented the lowest utilization rate since 1970.

Six tables comprise the data base for this report: Review of Production, Producing Capacity & Capacity Utilization; Summary of Annual Production (1970-1982); Production of Noncellulosic, Cellulosic & Textile Glass Fibers as a Percentage of Total Man-Made Fiber Production; Summary of Producing Capacities (1970-1982); Producing Capacity of Noncellulosic, Cellulosic & Textile Glass Fibers as a Percentage of Total Man-Made Fiber Capacity; and Summary of Capacity Utilization Rates (1970-1982).

Review of Production, Producing Capacity & Capacity Utilization ties the three major components of this report -- production, producing capacity & capacity utilization -- into one table for easy reference and comprehension.

For the purpose of the report, **November** Textile Economics Bureau capacity survey data are used as the annual capacity figures.

The tables on pages 6 and 7 present the capacity data for 1970-1982 and percent changes over those years.

In similar fashion, the tables on pages 4 and 5 list the production data for the same period and percent changes for those years.

Finally, the table on page 8 gives the capacity utilization rates by individual as well as generic fiber type.

NA means not available.

Rayon yarn includes industrial (high tenacity) yarn and textile (regular+intermediate tenacity) yarn+monofilaments.

Acetate includes diacetate and triacetate. The acetate staple+tow data do not include poundages of tow for cigarette filtration.

Olefin includes polypropylene yarn+monofilaments+spunbonded+film fiber and polyethylene monofilaments+film fiber.

For the purposes of this report, production data for miscellaneous fibers, such as saran and spandex, are not included.

a. All annual capacity data are as of November of that year.

The data do not include the poundages of acetate tow for cigarette filtration.

INDUS. means industrial yarn and monofil, i.e., coarser than 500 denier with an Instron tenacity of 7 grams or more per denier.

CARPET means bulked continuous filament yarn for carpets.

TEXTILE means yarn & monofil for other (textile) applications. Low denier industrial yarn is tabulated here also.

Olefin includes polyethylene & polypropylene. Not included here are data on spunbonded polyethylene, monofilament bristles and film fiber used for decorative or tying ribbon, etc. Olefin monofil includes the circular and rectangular (ribbon) cross sections plus spunbonded polypropylene. Olefin film fiber includes slit and split or fibrillated film.

For the purposes of this report, production data for miscellaneous fibers, such as saran and spandex, are not included.

SOURCES: The man-made fiber import and export data are from the U.S. Bureau of the Census. The man-made, cotton and wool manufactures data are from *Cotton and Wool Situation*, a publication of the U.S. Department of Agriculture.

The total man-made fiber and manufactures import, export and balance data of this table cover the cellulosic and noncellulosic fibers only; textile glass fiber is excluded.

[a] **E** means a net export balance; **I** is a net import balance.

[b] Acetate tow is excluded.

[c] The fibers included are shown as "Total Man-Made Fiber Above" on page 15 of this issue for imports and page 250 of the December issue for exports.

[d] Man-made fiber equivalent.

[e] Raw cotton equivalent. Data are similar to those on page 45 of the March 1982 *Organon*.

[f] Raw wool content. The data differ from those on page 45 of the March *Organon* to the extent that noils and waste are included here.

a. Includes data from all types of broad woven fabric mills, i.e., cotton, man made, woolen & worsted and tire cord & fabric mills.

b. Includes 100% spun rayon and acetate as well as rayon and/or acetate/cotton blends, regardless of blend level.

c. Regardless of blend level.

d. All Other Yarns includes spun nylon, other blends, silk and paper.

a. Includes a nominal amount of cotton and some steel.

NEW BOOKS

PRINTED TEXTILES

Terry A. Gentille. Prentice Hall, Inc. Englewood Cliffs, NJ 07632. 118 pages. 1982. Hardcover, $21.95. Softcover, $12.95.

This book, from Prentice-Hall's Art & Design series, is subtitled "a guide to creative design fundamentals" and is directed to the individual who is interested in becoming a creative professional textile designer. It presents basic information on the use and care of tools of the trade and an introduction to specific production printing techniques. It provides the reader with opportunities to experience the process of producing a textile design, from inspiration and concept to final presentation in a form suitable to the requirements of the industry.

In addition, step-by-step instructions are provided on how to develop motifs, design layouts and create repeats. Basic painting and drawing techniques used by textile designers are fully illustrated, as are specific designs and fabrics by individual artists. Exercises are designed to stimulate the imagination, encourage the use of a wide range of techniques and materials and develop various styles and moods. The book concludes with a glossary of essential terms and a bibliography.

a. Drapery & Bedspread Fabrics has been dropped from this category because any type of fabric can be used for those purposes and including it amounted to double counting.

b. These figures have been revised for 1981 because a number of companies were incorrectly including their chiefly cotton oxford shirting in the chiefly polyester category.

c. Felts are not included.

d. Acrylic+modacrylic and polyester. Does not include polyester for 3rd & 4th Q 1981.

e. Acrylic+modacrylic only.

f. Includes polyester blanketing.

g. Includes filament & spun yarn fabrics.

h. Textured polyester warp only. Other polyester warp is included in Other Filament Warp below.

i. Includes filament polyester warp, except textured polyester.

j. 100% or chiefly man-made fibers, chief fiber not specified. Also includes small poundages of tie, twisted paper yarn and girdle & swimwear fabrics.

THE TEXTILE INDUSTRY AND ITS BUSINESS CLIMATE
(Proceedings of the Fuji Conference)

Edited by Akio Okochi and Shin-ichi Yonekawa. University of Tokyo Press. Distributed by Columbia University Press, 562 West 113th Street, New York, NY 10025. 299 pages. Hardcover. 1982. $29.50.

The third meeting of the Second Series International Conference on Business History was held on January 5-8, 1981, at the Fuji Education Center, Shizuoka, Japan, under the auspices of the Business History Society of Japan. The central theme of the meeting was an international comparison of the cotton industry and its business climate, with cotton chosen because it was a leading industry in several nations in the course of their industrialization.

This book is a record of that meeting, in which business historians from Japan, Korea, India, Germany, Britain and the United States describe development and decision-making in the textile industries of both industrial and developing countries. Among their concerns are the adoption of new technologies for textile-making; the ways in which specific companies expanded by integrating raw material processing or other related activities into their operations; and the effect of the business climate of the time and place on entrepreneurial decisions.

Following is a list of the papers included: the growth of cotton spinning firms: a comparative study; the structure of the the British cotton industry, 1846-1914; the business climate of the German cotton industry, 1850-1914; the business strategy of Japanese cotton spinners: overseas operations 1890 to 1931; innovations in the Indian textile industry: the formative years; changing patterns of management in the Lowell mills; locational patterns of southern [U.S.] textile mills, 1880-1920; the business climate and industrialization of the Korean fiber industry; and the Japanese cotton spinning industry during the pre-World War I period. Each of these topics is followed by the comments of two of the other participants at the conference.

SOURCE: U.S.Census Bureau Report IM145X.

NES - Not elsewhere specified.

* These items are not reported by the Census as cellulosic vs. noncellulosic. Any separation between cellulosic and noncellulosic is estimated, based mainly on average declared value.

a. Also includes 310.0510 & .0610.

b. Also includes 310.0530, .0550, .0630 & .0650.

c. Also includes 309.0340, .0365, .0500, .0630, .0640 & .0665.

d. There may be some acetate yarn in these data, but the Census figures do not permit a segregation.

e. Also includes 310.1110 & .1114.

f. Also includes 310.2010 & .2110.

g. Also includes 310.1150, .1155, .1170, .2030, .2050, .2130 & .2150.

h. Also includes 310.5005 & .5030.

i. Also includes 310.4046, .4047, .4050, .5015, .5046, .5047, .5049 & .5051.

j. Chiefly roving. Also includes 309.9800 & .9900.

a. Year-to-date totals except for stock, which is the latest month's data.

b. The monthly production of each fiber may be calculated as total shipments plus a stock increase, or less a stock decrease, over the month.

c. Producers' total domestic plus export shipments.

d. Rayon yarn data are available annually only, see page 21 of the February 1982 issue.

e. Data for nylon include aramid.

f. Industrial is defined as 500 denier and coarser with an Instron tenacity of 7 grams or more per denier.

g. Low denier industrial is defined as finer than 500 denier with an Instron tenacity over 5.5 grams per denier.

h. Olefin yarn+monofilaments also includes spunbonded polypropylene and film fiber produced for textile end uses.

i. Saran and spandex data are not included in these totals. See page 21 of the February 1982 issue for annual data on these yarns.

j. Acetate staple+tow data are available annually only; see page 21 of the February 1982 issue.

MONTHLY REVIEW

Highlights

1982 U.S. Man-Made Fiber Imports for Consumption Total 133.5 Million Pounds . . . see page 29.

1982 U.S. Man-Made Fiber Exports Total 935.8 Million Pounds . . . see page 30.

***Textile Organon** Features . . .*
The Average Weight and Width of Broad Woven Fabrics . . . begins page 19.

1982 Production, Shipment and Inventory Analysis . . . begins Page 24.

Shipments of nylon staple+tow rose for the third consecutive month and acrylic+modacrylic staple+tow opened the new year with an increase over the December 1982 level.

Polyester staple+tow shipments, however, fell for the second straight month to the lowest level since last July and shipments of olefin+vinyon staple+tow fell to the lowest point since February of last year.

Nylon yarn shipments to the carpet trades fell in January, but shipments of nylon textile yarn rose.

Both polyester textile yarn and industrial yarn rose in January, while shipments of olefin yarn+monofilaments fell to the lowest point since July 1977.

ANNOUNCEMENT

It has been brought to our attention that maintaining the ***Textile Organon*** in reference-room condition represents a significant problem.

Since the ***Organon*** is physically small, 16 pages, and published without a protective cover, many individual copies often "disappear" from reference rooms, while those which do remain become dog-eared and take on a worn and shabby look.

To help with these problems, the Textile Economics Bureau would like to offer you an alternative . . . hard-cover bound volumes of all 12 issues of the ***Textile Organon*** published in 1982 for the low price of $50.00 each. Also, 1981 volumes are available for $35, 1980 for $30, 1979-1970 for $15 and 1969 & earlier $10.

These volumes will go fast . . . so order now!

The Average Weight and Width of Broad Woven Fabrics

During the period from 1977 to 1982, the average width of cotton broad woven fabric increased just one percent. In 1977, the average linear yard of cotton broad woven fabric included 1.25 square yards of material. By the first quarter of 1982 the ratio of square yards per linear yard had increased to only 1.26.

The average width of man-made fiber broad woven fabric, however, increased 4% over the same period, with the ratio of square yards per linear yard growing from 1.57 in 1977 to 1.64 by the first quarter of 1982.

The ratio of square yards per linear yard for woolen and worsted fabric remained unchanged at 1.7 for 1977 and 1982.

All the data presented in the following series of tables (pages 19-23) were taken from the U.S. Census Bureau Report MC-22T, which was issued in December 1982.

These tables are meant to be used in conjunction with the broad woven data tables found periodically in the ***Organon*** as taken from Census Report MQ-22T.

The broad woven fabric production data are listed in terms of linear and square yards, pounds, square yards per linear yard, linear and square yards per pound and, for woolen and worsted fabrics, ounces per linear and square yard. All these data are first quarter data only.

As used in conjunction with Census Report MQ-22T, this presentation permits an analysis of the relative widths and weights of broad woven fabrics as related to the consumption of man-made and natural fibers for the years 1968 to 1982.

a. In millions.
b. Includes stretch weaves, twills, satins and sheers.
c. Includes household fabrics (marquisettes, drapery, upholstery, etc.).
d. Includes saran and olefin.
e. Except blanketing.
f. Includes carded broadcloth.
g. Includes corduroy.
h. Includes broadcloth.
i. Includes combination filament and spun warp or filling.
j. Includes silk, tie, twisted paper yarn and girdle & swimwear fabrics.

1982 Production, Shipment and Inventory Analysis

In comparing 1982 to 1979-1981, production, domestic shipments and exports of noncellulosic yarn+monofilaments and staple+tow have all declined. Imports of noncellulosic fiber, however, though relatively small in relation to available supply, have increased greatly on a percentage-change basis, with the exception of a decrease recorded for staple+tow imports from 1981-1982.

Yet in comparing third and fourth quarter 1982 production and domestic shipment data, both yarn+monofilaments and staple+tow increased. Exports of yarn+monofilaments declined over the period, but staple+tow exports increased. Imports of both yarn+monofilaments and staple+tow rose during fourth quarter.

FOOTNOTES FOR TABLE ABOVE & OPPOSITE

– Means no change.

See footnotes on page 26.

a. Percent change from third quarter to fourth quarter 1982.

b. Percent change from fourth quarter 1981 to fourth quarter 1982.

c. Percent change from 1981 year total to 1982 year total.

d. Percent change from 1980 year total to 1982 year total.

e. Percent change from 1979 year total to 1982 year total.

FOOTNOTES FOR TABLE ABOVE & OPPOSITE

"Imports" are imports for consumption, as reported by the U.S. Census Bureau.

a. Data for rayon and "Other" non-cellulosic yarns (chiefly saran & spandex) are available annually only; see pages 20 & 21 of the February 1982 issue for further details on these yarns.

b. Olefin Yarn+Monofilament data also include film fiber as well as spunbonded polypropylene.

c. Yarn imports include singles and plied.

d. Acetate staple+tow data are available annually only; see pages 20 & 21 of the February 1982 issue for further details.

e. These figures are composites of the nylon, acrylic+modacrylic, polyester and olefin staple imports, i.e., Commodity Numbers 309.4338, .4342, .4345 & .4346.

SOURCE: U.S.Census Bureau Report IM145X.

NES Not elsewhere specified.

* These items are not reported by the Census as cellulosic vs. noncellulosic. Any separation between cellulosic and noncellulosic is estimated, based mainly on average declared value.

a. Also includes 310.0510 & .0610.

b. Also includes 310.0530, .0550, .0630 & .0650.

c. Also includes 309.0340, .0365, .0500, .0630, .0640 & .0665.

d. There may be some acetate yarn in these data, but the Census figures do not permit a segregation.

e. Also includes 310.1110 & .1114.

f. Also includes 310.2010 & .2110.

g. Also includes 310.1150, .1155, .1170, .2030, .2050, .2130 & .2150.

h. Also includes 310.5005 & .5030.

i. Also includes 310.4046, .4047, .4050, .5015, .5046, .5047, .5049 & .5051.

j. Chiefly roving. Also includes 309.9800 & .9900.

SOURCE: U.S. Census Bureau Report EM546.

a. Includes thrown, singles and plied yarn.

b. Includes an undetermined amount of rayon tire cord and cord fabric.

c. Includes an undetermined amount of noncellulosic tire cord and cord fabric.

d. Includes zero twist yarns.

e. These data are obviously incorrect because of misclassification. Most of these poundages should be included with filament yarn.

MONTHLY REVIEW

Highlights

February Shipments of Polyester Staple+Tow Increased to 172.1 Million Pounds . . . see page 48.

1982 Shipments of Man-Made Fiber Staple+Tow to the Apparel End Uses Fell to 1,328.8 Million Pounds . . . see page 45.

1982 Shipments of Man-Made Fiber Yarn+Monofilaments to Home Furnishings End Uses Dropped to 1,016.6 Million Pounds . . . see page 44.

***Textile Organon** Feature*

1982: A Year In Perspective . . . begins page 35.

February shipments of polyester staple+tow rose to the highest level since March of last year and shipments of acrylic+modacrylic staple+tow rose for the second straight month.

Shipments of olefin+vinyon staple+tow rose to the highest level since September of last year, but nylon staple+tow shipments fell in February.

Nylon yarn shipments to the carpet trades rose in February and shipments of nylon textile yarn rose to the highest level since December of 1981.

Polyester textile yarn shipments rose to the highest point since last April, although shipments of polyester industrial yarn fell, but shipments of olefin yarn rose in February.

a. Average Denier calculated by harmonic mean method.

b. Monofilaments up to 40 denier. Fewofils are multifilament yarns with 4 or fewer filaments in the bundle.

c. Includes low denier industrial yarn through 1978.

1982: A Year In Perspective

In 1982, U.S. mill consumption of man-made fibers declined by 13% to the second lowest level since 1970. This was the third consecutive year to show a decline in consumption. At the same time, man-made fibers registered a slight decrease in market share when compared to cotton. In 1982, man-made fiber share fell to 74% of all fibers consumed, while cotton rose to 25%.

Exports of man-made fibers declined in 1982. Although there was a net export balance of nearly 832 million pounds, the 1982 level was over 482 million pounds less than in 1981.

Imports of man-made fibers also fell in 1982, but imports of products produced from man-made fibers increased by nearly 59 million pounds. These, when allied with a declining export volume in 1982, helped to create a net import balance of almost 260 million pounds. **This figure is 258 million pounds greater than the 1981 net import balance of approximately 2 million pounds.**

In the following feature (pages 35-42), data are presented to describe 1982 in terms of domestic shipments, imports, exports and consumption of man-made fibers and related products. For comparison purposes, man-made fiber, cotton and wool data are supplied as well. In previous years some of the following tables were published in the February issue of the ***Textile Organon***. This year, they are presented in one issue to better give an overall view of the historical trends in the man-made fiber industry.

MILL CONSUMPTION BY FIBER

BILLION POUNDS

a. Man-made fiber data include textile glass fiber.
b. Percent change from year to year.
c. Percentage change from 1970.
d. Percent of total fiber consumption.

a. Rayon yarn includes industrial (high tenacity) yarn and textile (regular+intermediate tenacity) yarn+monofilaments. Beginning January 1965, the high tenacity rayon yarn of 900 denier & finer is tabulated with regular tenacity yarn.

b. Acetate includes diacetate and triacetate. The acetate staple+tow data do not include the poundages thereof produced for cigarette filtration purposes.

c. Nylon includes aramid.

d. Olefin includes polypropylene yarn+ monofilaments+spunbonded+film fiber and polyethylene monofilaments+film fiber.

e. Ester means polyester.

f. Other yarn is chiefly saran and spandex in recent years.

g. Acrylic includes modacrylic.

h. Other staple+tow includes only olefin and vinyon for recent years.

Earlier years' data are on pages 8 & 9 of the January 1962 *Organon* Base Book issue and page 4 of the January-February 1971 issue.

Domestic consumption (CONS) means the sum of producers' domestic shipments and imports for consumption.

Imports for consumption (IMPORTS): yarn+monofil includes yarn singles, monofilaments & strips; staple+tow includes grouped filaments. Not included here are plied, spun, & handwork yarns; sewing thread; sliver, tops & roving and waste.

a-h. See these lettered footnotes on the opposite page.

Noncellulosic data from 1940 are on page 5 of the January-February 1971 issue. Cellulosic data from 1911 are on page 9 of the January 1962 *Organon* Base Book.

SOURCE: U.S. Department of Agriculture, ***Cotton and Wool Outlook & Situation.***

a. Man-made fiber yarn exports do not include substantial poundages of indirect exports. Indirect exports are shipments which are billed to a domestic customer by a yarn producer but which are ultimately exported by the customer. Indirect export data are available for the years 1980-1982 only; the corresponding poundages for each year are, respectively (in millions of pounds): 142.4, 254.0 & 166.2.

Includes sliver, tops, roving, plied (textured and other), thrown and spun yarn, sewing thread and handwork yarns. Yarn singles (textured and other) are not included here; rather they are included in Column 13 on page 38 of this issue.

b. Includes broad & narrow woven fabrics and knit cloth, except that cotton narrow fabrics and wool knit fabrics are included in All Other.

c. Wool includes lace & lace articles, veils & veilings and nets & nettings.

d. The man-made fiber data are tire cord & tire cord fabric.

e. Includes carpets & rugs. Lace window curtains are in All Other.

f. Includes such products as lace & lace articles, lace window curtains, braids, tassels, polishing & dustcloths, etc. Wool includes knit fabric in the piece, but not lace & lace articles, which are in Wearing Apparel.

g. Includes broad & narrow woven fabrics and knit cloth. Cotton also includes table damask, tire cord & fabric. Cotton knit fabrics and narrow fabrics are included in All Other.

h. Includes carpets & rugs.

i. Includes such products as lace & lace articles, polishing & dustcloths, braids, tassels, etc. Cotton also includes knits and narrow fabric.

Note: In the case of blended or mixed fiber products, the poundages of each of the component fibers have been estimated and included in the proper category, e.g., in a polyester and cotton fabric, the polyester portion is tabulated with man-made fiber and the cotton portion with cotton. A waste factor has been included to bring the data to the equivalent raw fiber consumption.

SOURCES: The man-made fiber import and export data are from the U.S. Bureau of the Census. The man-made, cotton and wool manufactures data are from *Cotton and Wool Outlook & Situation*, a publication of the U.S. Department of Agriculture.

The total man-made fiber and manufactures import, export and balance data of this table cover the cellulosic and noncellulosic fibers only; textile glass fiber is excluded.

a. **E** means a net export balance; **I** is a net import balance.

b. Acetate tow is excluded.

c. The fibers included are shown as "Total Man-Made Fiber Above" on page 46 of this issue for imports and page 30 of the February issue for exports.

d. Man-made fiber equivalent.

e. Raw cotton equivalent. Data are similar to those on page 39 of this issue.

f. Raw wool content. The data differ from those on page 39 of this issue to the extent that noils and waste are included here.

a. Filament yarn plus monofilament shipments by primary trade or end use; olefin includes spunbonded polypropylene but does not include spunbonded polyethylene.

b. Small poundages of polyester are included in All Other.

c. Small poundages of olefin are included in All Other.

d. Small poundages of nylon and polyester are included in All Other.

e. Other Broad Woven except carpets, tire fabric, flat belting, etc. The olefin poundages include other home furnishings applications only, i.e., industrial applications are in All Other.

f. Narrow Woven includes apparel ribbons and braids, auto seat belts and/or furniture webbing.

g. Small poundages of olefin are included in All Other.

h. All Other includes sewing thread and other industrial applications. The olefin poundages include sliver knit backing. Also includes indirect exports starting 1st Quarter 1980.

i. These poundages are included in the Total Domestic area above.

NEW BOOK

PRODUCTION AND APPLICATIONS OF POLYPROPYLENE TEXTILES

O. Pajgrt, B. Reichstadter and F. Sevcik. Elsevier Science Publishers. P.O. Box 211, 1000 AE Amsterdam, The Netherlands. Distributor in the U.S.A. and Canada: Elsevier Science Publishing Co., Inc. 52 Vanderbilt Ave., New York, NY 10017. 388 pages. 1983. U.S. $95.75 (in U.S.A. & Canada), Dfl. 225.00 (rest of world).

Research for this book, Volume 6 in Elsevier's Textile Science and Technology series, was conducted at the Wool Research Institute in Brno, Czechoslovakia. It provides a complete, comprehensive survey of the properties, processing and use of polypropylene fibers, together with detailed descriptions of several testing methods and examples of the use of these fibers. The properties and forms of polypropylene fibers were considered, leading to a detailed description of how to utilize the fibers, not only by themselves but also in blends with others.

The processing of polypropylene staple fibers in spinning and weaving is discussed as well as the processing and use of polypropylene filament yarns. Considerable attention is also given to polypropylene tapes. Chapters written from a practical viewpoint are those dealing with the use of these fibers in nonwoven

(Continued on page 47)

SOURCE: U.S.Census Bureau Report IM145X.

NES · Not elsewhere specified.

* These items are not reported by the Census as cellulosic vs. noncellulosic. Any separation between cellulosic and noncellulosic is estimated, based mainly on average declared value.

a. Also includes 310.0510 & .0610.

b. Also includes 310.0530, .0550, .0630 & .0650.

c. Also includes 309.0340, .0365, .0500, .0630, .0640 & .0665.

d. There may be some acetate yarn in these data, but the Census figures do not permit a segregation.

e. Also includes 310.1110 & .1114.

f. Also includes 310.2010 & .2110.

g. Also includes 310.1150, .1155, .1170, .2030, .2050, .2130 & .2150.

h. Also includes 310.5005 & .5030.

i. Also includes 310.4046, .4047, .4050, .5015, .5046, .5047, .5049 & .5051.

j. Chiefly roving. Also includes 309.9800 & .9900.

a. Year-to-date totals except for stock, which is the latest month's data.

b. The monthly production of each fiber may be calculated as total shipments plus a stock increase, or less a stock decrease, over the month.

c. Producers' total domestic plus export shipments.

d. Rayon yarn data are available annually only; see page 37 of this issue.

e. Data for nylon include aramid.

f. Industrial is defined as 500 denier and coarser with an Instron tenacity of 7 grams or more per denier.

g. Low denier industrial is defined as finer than 500 denier with an Instron tenacity over 5.5 grams per denier.

h. Olefin yarn+monofilaments also includes spunbonded polypropylene and film fiber produced for textile end uses.

i. Saran and spandex data are not included in these totals. See page 37 for annual data on these yarns herewith.

j. Acetate staple+tow data are available annually only; see page 37 of this issue.

(Continued from page 45)

fabrics, household textiles and technical textile articles. In addition, the book covers manufacturing apparel from woven and knitted fabrics containing polypropylene fibers, as well as the renovation of textile products. With 141 illustrations, 105 tables, bibliographies and an index, this extremely detailed view of polypropylene textiles should be a valuable addition to any textile library.

Textile Organon

Vol 54, No. 4 · April 1983

A publication of the Textile Economics Bureau, Inc.

MONTHLY REVIEW

Highlights

Shipments of Polyester Staple+Tow Totaled 191.4 Million Pounds in March ... see page 64.

General Imports of Man-Made Fiber Apparel From China Rose Over 102% in 1982 ... see page 51.

1982 U.S. Exports of Noncellulosic Textile Yarn to Asia & Oceania Fell to 126.4 Million Pounds ... see page 55.

***Textile Organon** Feature*
1982 Import-Export Review ... begins page 50.

Polyester staple+tow shipments rose in March to the highest level since December of 1981 and shipments of acrylic+modacrylic staple+tow rose to the highest level in a year.

Shipments of olefin+vinyon staple+tow rose for the third consecutive month and shipments of nylon staple+tow rose to the highest level in nearly a year.

Nylon yarn shipments to the carpet trades rose for the second straight month and shipments of nylon textile yarn rose to the highest point since September of 1981.

Polyester textile yarn shipments rose to the highest level since November of 1981 and shipments of polyester industrial yarn rose to the highest level since June of last year, while shipments of olefin yarn+monofilaments rose for the third consecutive month.

1982 Import-Export Review

In 1982, U.S. imports of man-made fiber apparel rose by 9% to 2,099 million equivalent square yards. Imports from Africa, Asia & Oceania - accounting for over 90% of the total - rose by 11%, an increase of nearly 40% since 1977.

Imports from Taiwan totaled 660 million equivalent square yards, nearly a 13% increase over 1981 and an increase of 34% since 1977. However, imports from the Republic of Korea fell 3% in 1982 to 522 million square yards.

1982 imports of man-made fiber apparel from the People's Republic of China totaled 192 million equivalent square yards, an increase of 102% above 1981 and 3,740% above the 1977 level. On a year-to-year basis from 1977-1981, these imports from the People's Republic of China rose 160% between 1977 and 1978, nearly 185% between 1978 and 1979, 27% between 1979 and 1980 and over 102% between 1980 and 1981.

U.S. exports of noncellulosic textile yarn fell to 265.0 million pounds in 1982, a decline of almost 92 million pounds from the 1981 level. Exports to Asia & Oceania fell by over 110 million pounds to 126.4 million pounds.

Also in 1982, exports of noncellulosic staple+tow fell by nearly 380 million pounds to 411.0 million pounds. Exports to Asia & Oceania fell by over 351 million pounds to 207.4 million pounds.

The following feature (pages 51-58) provides 1982 imports and exports of man-made fibers, man-made fiber apparel and other man-made fiber manufactures. For several tables, dollar equivalent values are provided. Please note that the table opposite now provides a percent-change analysis to better depict particular import trends.

U.S. GENERAL IMPORTS OF MAN-MADE FIBER APPAREL

The three section totals on this page agree with the corresponding data on pages 57 and 58 of this issue.

The by-country data in the "Imports of Man-Made Fiber" table above include singles, monofilaments & strips (see page 28 of the February 1983 and the corresponding pages of earlier February *Organon* issues), plied filament yarn, staple, grouped filaments, waste, spun yarns and textile glass fiber. The "products not detailed" in the above table comprise other yarns - NES, handwork yarns & sewing thread and sliver, tops & roving.

SOURCE: U.S. Census Bureau Report EX546.

a. Includes thrown, singles and plied yarn.

b. Includes an undetermined amount of rayon tire cord and cord fabric.

c Includes an undetermined amount of noncellulosic tire cord and tire cord fabric.

d. Includes zero twist yarns.

e. These data are obviously incorrect because of misclassification. Most of these poundages should be included with filament yarn.

A Textile Organon Feature.

NES - Not elsewhere specified.

* These items are not reported by the Census as cellulosic vs. noncellulosic. Any separation between cellulosic and noncellulosic is estimated, based mainly on average declared value.

a. Also includes 310.0510 & .0610.

b. Also includes 310.0530, .0550, .0630 & .0650.

c. Also includes 309.0340, .0365, .0500, .0630, .0640 & .0665.

d. There may be some acetate yarn in these data, but the Census figures do not permit a segregation.

e. Also includes 310.1110 & .1114.

f. Also includes 310.2010 & .2110.

g. Also includes 310.1150, .1155, .1170, .2030, .2050, .2130 & .2150.

h. Also includes 310.5005 & .5030.

i. Also includes 310.4046, .4047, .4050, .5015, .5046, .5047, .5049 & .5051.

j. Chiefly roving. Also includes 309.9800 & .9900.

A Textile Organon Feature.

a. As of 1978, the commodity numbers for Other Woven Fabrics in the Piece Except Pile Fabrics ran from 338.2500 to 338.3098. In both 1981 and 1982 those commodity numbers, with the exception of those for textile glass (338.2500 & .2700), were revised, leaving both 1981 and 1982 data not comparable with those for earlier years.

End Of Textile Organon Feature.

a. Felts are not included.

b. Acrylic+modacrylic and polyester. Does not include polyester for 3rd & 4th Q 1981.

c. Acrylic+modacrylic only.

d. Includes polyester blanketing.

e. Included in item Polyester with Other Fibers above.

f. Includes filament & spun yarn fabrics.

g. Included in item Other Filament Warp below.

h. 100% or chiefly man-made fibers; chief fiber not specified. Also includes small poundages of tie, twisted paper yarn and girdle & swimwear fabrics.

a. Includes data from all types of broad woven fabric mills, i.e., cotton, man-made, woolen & worsted and tire cord & fabric mills.

b. Includes 100% spun rayon and acetate as well as rayon and/or acetate/cotton blends, regardless of blend level.

c. Regardless of blend level.

d. All Other Yarns includes spun nylon, other blends, silk and paper.

SOURCE: U.S. Census Bureau, ***Current Industrial Report MQ-22T.***

a. Also includes marquisettes, ninons and other sheers.

b. Includes household fabrics (marquisettes, drapery, upholstery, etc.).

c. Includes marquisettes, ninons, sheers, industrials and twills.

d. Includes marquisettes, ninons, sheers, industrials, taffetas and satins.

e. Includes filament combinations, chiefly rayon, and saran & olefin.

f. Except blanketing.

g. Includes carded broadcloth.

h. Includes seersucker and piece-dyed pattern fabrics.

i. Includes polyester blends with wool.

j. Included in Polyester Blends With Other Fibers above.

k. Textured polyester warp only. Other polyester warp is included in All Other Filament Warp below.

l. Includes filament polyester warp, except textured polyester.

m. Includes tie, twisted paper yarn and girdle & swimwear fabrics.

a. Year-to-date totals except for stock, which is the latest month's data.

b. The monthly production of each fiber may be calculated as total shipments plus a stock increase, or less a stock decrease, over the month.

c. Producers' total domestic plus export shipments.

d. Rayon yarn data are available annually only; see page 37 of the March issue.

e. Data for nylon include aramid.

f. Industrial is defined as 500 denier and coarser with an Instron tenacity of 7 grams or more per denier.

g. Low denier industrial is defined as finer than 500 denier with an Instron tenacity over 5.5 grams per denier.

h. Olefin yarn+monofilaments also includes spunbonded polypropylene and film fiber produced for textile end uses.

i. Saran and spandex data are not included in these totals. See page 37 of the March issue for annual data on these yarns.

j. Acetate staple+tow data are available annually only; see page 37 of the March issue.

MONTHLY REVIEW

Highlights

May 1983 Polyester Textile Yarn Capacity Rose to 1,270 Million Pounds . . . see page 71.

May 1983 Textile Glass Fiber Capacity Dropped to 1,630 Million Pounds . . . see page 70.

First Quarter Domestic Shipments of Noncellulosic Yarn+Monofilaments Increased to 732.5 Million Pounds . . . see page 72.

***Textile Organon** Feature*

1982 Per Capita Consumption Review . . . begins page 66.

Shipments of nylon yarn to the carpet trades rose in April; these shipments have risen every month this year.

Polyester textile yarn shipments rose to the highest level since October 1981, but April shipments of polyester industrial yarn remained unchanged from March, and shipments of olefin yarn+monofilaments fell marginally.

Nylon staple+tow shipments rose in April, but shipments of acrylic+modacrylic fell.

Shipments of polyester staple+tow fell in April, but shipments of olefin+vinyon staple+tow rose to the highest level yet recorded this year.

1982 Per Capita Consumption Review

Per capita consumption of man-made fiber dropped in 1982 to 32.5 lbs., off from the 37.8-lb level of 1981. Per capita consumption of cotton fell to 10.7 lbs. and wool to 0.5 lb.

The U.S. population grew 1% in 1982 to 232.0 million people. But this increase compares with a drop of total per capita fiber consumption of 13% in 1982 to 43.7 lbs.

Concurrently, the per capita gross national product (goods produced) fell 5% to $2,849, while per capita consumption of imports of man-made fiber manufactures increased 7% to 3.0 lbs.

Man-made fiber apparel imports accounted for 70% of all imports of man-made fiber manufactures.

In the following feature (pages 67-69), 1982 is described in terms of gross national product (goods produced only), U.S. population and consumption of man-made fiber, cotton & wool. For comparison purposes, a per capita analysis is supplied for GNP and consumption of man-made fiber, cotton & wool. In addition, data depicting the imports of the latter manufactures are shown in relation to the domestic consumption of fiber.

U.S. POPULATION, GROSS NATIONAL PRODUCT (GOODS PRODUCED)[a] & PER CAPITA GROSS NATIONAL PRODUCT

YEAR	POPULATION[b]	GNP	PER CAPITA[c]

a The noncellulosic fibers included are those listed in the September ***Organon*** issues each year, with the exception of Aramid fiber as of May 1983. Yarn+mono includes olefin film fiber and spunbonded polypropylene. Staple+tow includes fiberfill.

b. The acetate production and producing capacity data include diacetate and triacetate. The acetate staple+tow data do not include the large poundages for cigarette filtration.

c. Textile glass fiber, all types.

d. Grand Total Yarn means the yarn+mono shown **plus** all textile glass fiber.

e. Actual producing capacity as of the date shown.

f. Future producing capacity planned for certain dates as of May 1983.

ANNOUNCEMENT

The 1982 Textile Fiber End Use Survey will appear in the September issue of the ***Textile Organon***. Previously, the end use survey appeared in the November issue of the ***Organon*** each year.

As a service to our readers, the earlier publication of this survey will permit the more timely use of these crucial data.

The U.S. listing of man-made fiber producers, normally found in September, will now appear in November.

NOTE: As of the May 1983 survey, nylon capacity data no longer include Aramid fiber.

IND means industrial yarn and monofil, i.e., 500 denier & coarser, with an Instron tenacity of 7 grams per denier or more; **CARP** means bulked continuous filament yarn for carpets; **TEXTILE** means yarn & monofil for other (textile) applications. Low denier industrial yarn is tabulated here also.

a. Olefin includes polyethylene & polypropylene. Not included here are data on spunbonded polyethylene, monofilament bristles, film fiber used for decorative or tying ribbons, etc.

b. Olefin monofil includes the circular and rectangular (ribbon) cross sections plus spunbonded polypropylene. Olefin film fiber includes slit and split or fibrillated fiber.

c. Other yarn & monofil is chiefly saran and spandex. Aramid data are included with nylon.

d. Actual producing capacity as of date shown.

e. Future producing capacity planned for certain & dates as of May 1983.

U.S. MAN-MADE FIBER PRODUCING CAPACITY

In May, the U.S. man-made fiber producing industry had the capacity to produce 11,911 million pounds of fiber per year. This was a decrease of ½% from the capacity in place last November. However, capacity is planned to increase 3% by May 1985 to 12,270 million pounds.

Cellulosic fiber capacity is expected to change very little over the next two years. Current capacity of 895 million pounds is planned to remain at that level through May 1985.

Noncellulosic fiber capacity (excluding textile glass fiber) is slated for an increase of 2½%, or 240 million pounds, over the next two years.

SURVEY COVERAGE & DEFINITIONS

The survey figures shown in the page 70 table cover the man-made fibers in all their primary forms, i.e., filament yarn, monofilaments, polypropylene spunbonded and film fiber are tabulated as filament yarn, while staple, tow and fiberfill are tabulated as staple. The glass fiber data cover all primary forms of that fiber (yarn & strand, staple yarn & sliver, roving & cake, chopped & milled fiber and mat) although only an aggregate figure is published to avoid disclosure of individual company data. The textile glass data are included with the filament yarn totals. The "capacity" to produce waste is ***not*** included in this survey.

Capacity is based on the current and projected "mix" of deniers, filament counts, packages, etc. It is ***emphasized*** that all figures refer to ***current and planned*** capacity. ***They are not to be interpreted as a production forecast.***

Under the survey definitions, all productive equipment which is currently, or is planned to be, in operable condition is counted as capacity, regardless of whether it is actually producing fiber at the time the capacity measurement is taken. On the other hand, equipment which is definitely scheduled for scrapping, or which has been scrapped since the last survey, is excluded from the capacity tabulation. Put another way, the capacity data reflect ***potential,*** rather than ***operating,*** capacity.

FOOTNOTES FOR TABLE ABOVE & OPPOSITE

"Imports" are imports for consumption, as reported by the U.S. Census Bureau.

a. Data for rayon and "Other" noncellulosic yarns (chiefly saran & spandex) are available annually only; see pages 36 & 37 of the March 1983 issue for further details on these yarns.

b. Nylon includes Aramid in 1982.

c. Olefin Yarn+Monofilament data also include film fiber as well as spunbonded polypropylene.

d. Yarn imports include singles and plied.

e. Acetate staple+tow data are available annually only; see pages 36 & 37 of the March 1983 issue for further details.

f. These figures are composites of the nylon, acrylic+modacrylic, polyester and olefin staple imports, i.e., Commodity Numbers 309.4338, .4342, .4345 & .4346.

SOURCE: U.S.Census Bureau Report IM145X.

NES - Not elsewhere specified.

• These items are not reported by the Census as cellulosic vs. noncellulosic. Any separation between cellulosic and noncellulosic is estimated, based mainly on average declared value.

[a] Also includes 310.0510 & .0610.

[b] Also includes 310.0530, .0550, .0630 & .0650.

[c] Also includes 309.0340, .0365, .0500, .0630, .0640 & .0665.

[d] There may be some acetate yarn in these data, but the Census figures do not permit a segregation.

[e] Also includes 310.1110 & .1114.

[f] Also includes 310.2010 & .2110.

[g] Also includes 310.1150, .1155, .1170, .2030, .2050, .2130 & .2150.

[h] Also includes 310.5005 & .5030.

[i] Also includes 310.4046, .4047, .4050, .5015, .5046, .5047, .5049 & .5051.

[j] Chiefly roving. Also includes 309.9800 & .9900.

SOURCE: U.S. Census Bureau Report EM546.

a. Includes thrown, singles and plied yarn.

b. Includes an undetermined amount of rayon tire cord and cord fabric.

c. Includes an undetermined amount of noncellulosic tire cord and cord fabric.

d. Includes zero twist yarns.

e. These data are obviously incorrect because of misclassification. Most of these poundages should be included with filament yarn.

---

a. Year-to-date totals except for stock, which is the latest month's data.

b. The monthly production of each fiber may be calculated as total shipments plus a stock increase, or less a stock decrease, over the month.

c. Producers' total domestic plus export shipments.

d. Rayon yarn data are available annually only; see page 37 of the March issue.

e. 1983 data for Nylon exclude Aramid, but Aramid is included in 1982.

f. Industrial is defined as 500 denier and coarser with an Instron tenacity of 7 grams or more per denier.

g. Low denier industrial is defined as finer than 500 denier with an Instron tenacity over 5.5 grams per denier.

h. Olefin yarn+monofilaments also includes spunbonded polypropylene and film fiber produced for textile end uses.

i. Saran and spandex data are not included in these totals. See page 37 of the March issue for annual data on these yarns.

j. Acetate staple+tow data are available annually only; see page 37 of the March issue.

Dear Readers:

We at the Textile Economics Bureau have continually been working hard to make the ***Textile Organon*** both a better management tool and a better source for man-made fiber data.

To this end, we have increased the scope of the ***Organon's*** coverage of the man-made fiber markets. Special reports and features have highlighted various aspects of the industry. We feel the ***Organon*** now contains not only more, but better, data, more timely presentations and more complete summations of trends in the man-made fiber industry.

Yet we'd like to do more with the ***Organon*** . . . but first we'd like your opinions of our current coverage of the man-made fiber industry.

On the opposite page, you'll see a questionnaire. We ask you to rate our current monthly and periodic features according to usefulness. We plan to incorporate the results of this survey into our future plans for the ***Organon***. Your cooperation is greatly appreciated.

Thank you for your time and consideration.

Sincerely,

Robert P. Antoshak
Editor

Textile Organon

Vol 54, No. 6 · June 1983

A publication of the Textile Economics Bureau, Inc.

World Man-Made Fiber Survey

Featured in this issue is our annual survey of the world man-made fiber industry. Our customary world directory of man-made fiber producers begins on page 90; the 1982 cellulosic fiber production and planned producing capacity survey begins on page 87; and the 1982 noncellulosic fiber production and planned capacity survey begins on page 84.

Earlier years' world data for most of the tables contained in this issue will also be found in the January 1962 ***Textile Organon*** Base Book and in the June 1966, 1970 and 1979-1982 issues.

As in the past, all data in this issue are in *metric tons* except for the U.S. data on pages 108-112. The tables on pages 81, 83-89 & 107 will be published in the July issue showing data in *millions of pounds.*

1982 import-export data used to tabulate net available supply by country are not complete at this time. As a result, when these data are obtained, the 1982 net available supply table will be published in the ***Organon.***

ACKNOWLEDGEMENTS

This 1982 world man-made fiber survey would not have been possible without the help and cooperation of more than 150 foreign man-made fiber associations, producing companies and individuals, as well as the U.S. Foreign Service posts reporting through the Office of Textiles and Apparel, Domestic and International Business Administration, U.S. Department of Commerce. Their efforts are greatly appreciated.

OLEFIN DATA PRESENTATION

As has been the practice with past June issues, all world olefin data are presented separately from the other noncellulosic fibers. This method of presentation is necessitated by a lack of complete olefin data worldwide.

Two examples illustrate the problem:

A. Though the U.S. olefin production data published regularly in the ***Organon*** include yarn, monofil, staple, film fiber and spunbonded polypropylene, published Italian and Japanese olefin data, for example, show the production of yarn+monofilaments and staple+tow but no data on the production of film fiber, such as is used in sacks, fishing nets and carpet backing.

B. The published man-made fiber data of many other countries show little or no olefin fiber production at all, e.g., France, West Germany and the United Kingdom.

Due to the difficulties given above, the noncellulosic data except olefin are presented on page 84.

Then in the table on page 107, the olefin data of most countries are shown. These data consist of (a) the "official" country data published by a government, an association or other statistical agency. Then added to them is (b) an estimate of the olefin fiber, mainly slit and split film fiber, believed to have been produced in the country. No attempt is made to strike a world total as such, for the incomplete data of a number of countries, particularly in Latin America, East Europe and Africa, Asia & Oceania, prohibit such a total.

Y means yarn+monofilaments. **S** means staple+tow+fiberfill. The regional totals here are the same as those on pages 84-86.

a U.S.A. nylon producing capacity data do not include aramid.

b. Other fibers are alginate, azlon, spandex or elastomer, saran., TFE fluorocarbon, vinal and vinyon.

Textile glass fiber is defined on page 90 of this issue. The textile glass fiber producing capacity, in operable condition, is shown on an annual rate basis as of March 1983 (1983) and December 1984 (1984).

a. The data for East Europe do not include estimates for the U.S.S.R.

b. The Other Africa, Asia & Oceania countries are Australia, India and South Africa.

Y means yarn+monofilaments. **S** means staple+tow. **TOT** means total.

These totals do not include data for the Indonesian pilot plant nor production of cellulosic fibers in North Korea.

Production and producing capacity by country, divided as between rayon and acetate yarn, is given on page 89. Also note page 86 for data on production of acetate staple and cigarette tow.

VINISA S.A.I.C. Buenos Aires *Rafistal, Strofil* (E & P monofil)

TEXTILE GLASS FIBER

VIDRIERIA ARGENTINA S.A. (VASA)
Llavallol *Texover*

NOTES & DEFINITIONS FOR THIS WORLD DIRECTORY

This directory of producers separates the listing for each country into: (1) the cellulosic plus the noncellulosic fibers (except olefin), (2) olefin fiber and (3) textile glass fiber.

• means that the company produces olefin fiber as well as other man-made fiber(s). For example, Brasil Viscose S.A. produces olefin fiber in Brazil as well as nylon and rayon. The nylon and rayon entries for this company are in one section and the olefin entry is shown in the Olefin Fiber section.

* indicates that a new plant, or facilities for producing a new product at an existing plant, is in the planning or construction stage; such facilities are not expected to be operable before 1984 or later. Other product-plants are operable today or are expected to be operable during 1983.

The locality shown is the plant site.

Yarn means filament yarn.

Monofil means an extruded monofilament and may be either a round or a rectangular (ribbon) cross section. Monofilaments for bristles are excluded.

Film includes **Slit**: tape produced by slitting an already-attenuated wide sheet of olefin film; and **Split**: fibrillated slit film.

Not included in this survey is the slit film used for decorative or tying ribbon and such.

Captive means that most or all of the fiber produced is consumed by the company in a vertical operation.

GENERIC NAMES & TRADEMARKS

The generic fiber names used in this survey are mainly those promulgated by the U.S. Federal Trade Commission (FTC). Following are those generic names (in **bold** type) and a brief description of the fibers covered by each name.

The *italicized* words are trademarks. All other fiber names are generic and are shown in regular type.

TEXTILE GLASS FIBER

This fiber is made in two primary forms, namely, continuous strand and staple sliver. Continuous strand is drawn fiber (i.e., from a textile type bushing), while staple sliver, which is produced in relatively small amounts, is a blown fiber.

Textile glass fiber is produced and sold as filament yarn, strand, roving, mat, chopped strand, milled fiber and staple yarn & sliver. See the complete definition on page 185 of the September 1982 ***Organon***.

CELLULOSIC (ARTIFICIAL) FIBERS

Acetate. Cellulose acetate. Cigarette filtration tow is excluded.

Triacetate. Cellulose acetate, wherein not less than 92% of the hydroxyl groups are acetylated.

Rayon. Regenerated cellulose, including substitutions for not more than 15% of the hydrogens of the hydroxyl groups. Includes high wet modulus fiber.

Cupra means cuprammonium rayon.

The viscose rayon yarns are identified as ind (industrial or high tenacity yarn) and reg (regular or textile yarn).

NONCELLULOSIC (SYNTHETIC) FIBERS

Acrylic. At least 85% acrylonitrile by weight.

Modacrylic. 35% to 84% acrylonitrile by weight, except when it qualifies as rubber.

Azlon. Regenerated natural protein.

Nylon. A long-chain synthetic polyamide in which less than 85% of the amide linkages are attached directly to two aromatic rings. The types are identified as 6, 66, etc. Where a company produces both type 6 and type 66, the designation 6/66 is used.

Aramid. A long-chain synthetic polyamide in which at least 85% of the amide linkages are attached directly to two aromatic rings. In this survey, any aramid data are included with nylon.

Olefin. At least 85% ethylene, propylene or other olefin units by weight, except amorphous (noncrystalline) polyolefins qualifying as rubber. **E** means Polyethylene and **P** means Polypropylene. Also see adjoining notes on olefin fiber.

Polyester. At least 85% by weight of an ester of a substituted aromatic carboxylic acid, including but not restricted to substituted terephthalate units, and parasubstituted hydroxybenzoate units.

Saran. At least 80% vinylidene chloride by weight.

Spandex. At least 85% of segmented polyurethane.

Vinal. At least 50% by weight vinyl alcohol and wherein the vinyl alcohol plus acetal units are at least 85% by weight.

Vinyon. At least 85% vinyl chloride by weight.

Other man-made fibers included in this survey, but not listed by the FTC, are **Polycarbonate** (U.S.A.), **Polychlal** (Japan), **Promix** (Japan) and **TFE-** & **FEP-fluorocarbon** (Fluoro) (Japan, U.S.A. & U.S.S.R.).

Not covered in this survey are fibers which would fall under the FTC's generic designations of rubber, lastrile, metallic and novoloid. Fibers falling under the FTC designations of anidex and nytril are no longer produced.

International Standard #2076, "Generic Names of Man-Made Fibres," as promulgated by the International Organization for Standardization, lists some 23 names, of which the following are similar to the FTC designations: cupro, viscose, acetate, triacetate, acrylic, modacrylic, nylon or polyamide, polyester and glass. The ISO also lists modal (regenerated cellulose obtained by processes giving a high tenacity and a high wet modulus), alginate (metallic salts of alginic acid), chlorofibre (similar to the FTC's saran and vinyon), elastane (similar to the FTC's spandex), elastodiene, fluorofibre, polycarbamide, polyethylene & polypropylene (similar to the FTC's olefin), polyurethane, trivinyl and vinylal (similar to the FTC's vinal).

AUSTRALIA

FIBREMAKERS LTD.
Biconstituent Mulgrave, Victoria *Front Runner* (melded fabric)
Nylon 66 Bayswater, Victoria *Bri Nylon* (yarn & monofil)
Penrith, N.S.W. (tire cord)
Polyester Bayswater *Terylene* (yarn, staple & tow)

UNITED CARPET MILLS PTY. LTD.
Nylon 6 Thomastown, Victoria *Unilon* (yarn)
Polyester Thomastown (yarn)

In addition to the above, VILENE AUSTRALIA reportedly produces spunbonded products at Minto, N.S.W.; these are believed to be principally based on cellulosic fiber, but some polypropylene may be used.

OLEFIN FIBER

AMOCO FABRICS COMPANY, PATCHOGUE PLYMOUTH DIVISION
Liverpool, N.S.W. *Poly Bac, Propex* (P film)

SARLON INDUSTRIES PTY. LTD. Punchbowl, N.S.W. (E & P monofil & film)

The following companies produce olefin film fiber: A. ABRAHAMS & SONS PTY. LTD., Clayton, Victoria (*Koala, Polytex*); CORDEX INDUSTRIES PTY. LTD., Gladesville, N.S.W.; GEO. KINNEAR & SONS PTY. LTD., Footscray, Victoria (*Emu*); H. J. PENNO, Adelaide, South Australia; and TAPEX PTY. LTD., Sydney, N.S.W.

TEXTILE GLASS FIBER

AUSTRALIAN FIBREGLASS PTY. LIMITED
Dandenong, Victoria *A.C.I. Fibreglass*

AUSTRIA

AUSTRIA FASERWERKE G.m.b.H.
Polyester Lenzing *Trevira* (staple)

CHEMIEFASER LENZING A.G.●
Fluoro Lenzing (yarn & staple)
Rayon Lenzing (staple)

GLANZSTOFF AUSTRIA G.m.b.H. (formerly Enka Austria)
Rayon St. Pölten (ind & reg yarn)

OLEFIN FIBER

CHEMIE LINZ A.G. Linz *Asota, Linz PP-Multifil, Linz PP-Vlies*
(P yarn, staple & spunbonded)

The following companies produce olefin film fiber: CHEMIEFASER LENZING A.G., Lenzing; M. TEUFELBERGER, Wels; and SEUTTER, Unter Eggendorf.

BANGLADESH

ASHUGANJ PETROCHEMICAL COMPLEX
Acrylic Ashuganj* (staple)

BANGLADESH CHEMICAL INDUSTRIES
Rayon (staple)

KARNAPHULI RAYON AND CHEMICALS LIMITED
Rayon Chandraghona, Chittagong (reg yarn & staple*)

PYLON INDUSTRIES LIMITED
Nylon 6 Fouzdarhat Industrial Estate, Chittagong *Pylon* (yarn)

BELGIUM

N.V. BAYER S.A.
Nylon 6 Antwerpen *Dorix* (staple)

BEAULIEU-NYLON S.A.●
Nylon 6 Kruishoutem, East Flanders (yarn)

N.V. CELANESE S.A.
Acetate Lanaken, Limburg (yarn)
Triacetate Lanaken (yarn)

FABELTA NINOVE S.A.
Rayon Ninove, East Flanders (reg yarn)

FABELTA ZWIJNAARDE S.A.
Nylon 66 Zwijnaarde, East Flanders *Fabelnyl* (yarn)

OLEFIN FIBER

DELOTEX (P staple)

N.V. FIBRILO Zele, East Flanders (P staple & film)

S.A. LA LOKEROISE Lokeren, East Flanders *Alpha Carpet, Delta Carpet*
(P yarn & staple)

OSTEND STORES & ROPEWORKS S.A. Ostend, West Flanders

POLYFIL N.V. (subsidiary of Beaulieu) Wielsbeke (P yarn)

T.T.C. POLYOLEFINS S.A. Overpelt, Limburg (P monofil)

The following companies produce olefin film fiber: N.V. JONCKVANSTEEN, Passendale; S.A PHORMIUM, Zele, East Flanders; POLYTEXCO S.P.R.L., Beveren, Kortryk; and S.A. U.C.O., Ledeberg, Gent.

TEXTILE GLASS FIBER

N.V. BAYER S.A.
Antwerpen

OWENS-CORNING FIBERGLAS EUROPE S.A.
Battice, Liége *Fiberglas*

Cellulosic production and capacity data are combined with the Netherlands on page 87. Noncellulosic production and capacity data are combined with the Netherlands and Luxembourg under "Benelux" on page 84.

BRAZIL

ARTEPESCA - S.A. ARTIGOS DE PESCA DO NORDESTE●
Nylon 6 Igarassu, Pernambuco (monofil)

BANYLSA TECELAGEM DO BRASIL S.A.
Nylon 6 Aratú, Bahia *Fio Banylsa Nylon* (yarn)
Polyester Aratú *Fio Banylsa Poliester* (yarn)

BRASIL VISCOSE S.A.●

CHINA, PEOPLE'S REPUBLIC OF

Reliable information on locations of man-made fiber plants in the People's Republic of China is not available.

Rayon plants have been reported at Amoy, Antung, Canton, Foshan, Kirin, Nanchang, Nanking, Paoting and Shanghai. However, only the plants at Antung and Shanghai can be confirmed.

Noncellulosic plants are reported at Beijing (nylon, polyester & vinal); Canton (vinyon); Chenchiang, Harbin Province (acrylic); Chunking (vinyon); Fangshen, Beijing Province (polyester); Foochow (vinyon); Heilongjiang (polyester); Hsinhsiang, Paoting Province (nylon); Jinshan, Shanghai Province (polyester); Jinzhou (nylon); Lanzhou (acrylic, olefin & vinal); Liaoyang (nylon & polyester); Luda (acrylic); Nantong (polyester); Nanjing, Jiangsu Province (polyester); Pingdings (nylon); Shanghai (nylon, polyester, acrylic & vinyon); Shanyi (nylon); Shengli (vinyon); Sian (nylon); Sichuan (nylon & polyester); Sining (nylon); Tianjin (nylon & polyester); Tientsin (polyester & vinyon); Xinhu (polyester); Yizheng (polyester); and Zhenjiang (nylon & polyester).

The following three plants have been reported as producing textile glass fiber: Shanghai Glass Fiber Plant, Shanghai Tungfanghung Glass Fiber Plant and Tientsin Glass Fiber Plant.

COLOMBIA

CELANESE COLOMBIANA, S.A.
Acetate Yumbo, near Cali, Valle del Cauca (yarn)
Nylon 6 Sabaneta, Antioquia *Nylocel* (yarn)
Polyester Yumbo *Fortrel* (yarn & staple)

COLTEFIBRAS S.A.
Polyester Igatui, Antioquia* (yarn & staple)

ENKA DE COLOMBIA S.A.
Nylon 6 Girardota, Antioquia *Enkalon* (yarn)
Polyester Girardota *Terlenka* (yarn & staple)

FABRICA DE HILAZAS VANYLON S.A.
Nylon 6 Barranquilla, Atlántico *Vanylon* (yarn & monofil)

POLIMEROS COLOMBIANOS S.A.
Polyester Medellin, Antioquia *Primel* (yarn, staple, tow & tops)

ZYLETTE (LAFAYETTE)
Polyester Bogotá (yarn)

The following companies produce olefin film fiber: COMPANIA NACIONAL DE EMPAQUES S.A., Medellin; PLASTICOS DE MAGDELENA LTDA., Santa Marta; and POLYMER DE COLOMBIA S.A., Cartagena.

COSTA RICA

OLYMPIC FIBERS, S.A.
Polyester San Antonio de Belén (yarn)

CUBA

The incomplete and perhaps inaccurate plant listings shown on page 93 of the June 1971 issue are not repeated here.

Rayon plants have been reported at Balakovo, Barnaul, Cherkassy (Ukraine), Kalinin, Kamensk, Kiev, Klin, Krasnoyarsk, Leningrad, Mogilev, Ryazan, Saratov, Sokol, Sverdlovsk and Svetlogorsk.

Acetate plants have been reported at Engels, Fergana, Kaunas, Kirovakan and Moscow.

Nylon plants are reported at Barnaul, Chernigov, Daughavpils, Engels, Grodno, Kemerovo, Kiev, Klin, Kursk, Leningrad, Rustavi, Shchekino and Zhitomer.

Other noncellulosic fiber plants are located at Kustanay (vinyon), Minsk (polyester), Mogilev (polyester), Navoi, Polotsk (acrylic+modacrylic) and Saratov.

Textile glass fiber plants are reported at Astrakhan, Kalinin, Khabarovsk, Leningrad, Mingechaur, Moscow, Polotsk, Salavat, Saratov, Sevan and Severodonetsk.

WORLD MAN-MADE FIBER PRODUCER AFFILIATIONS & PERCENTAGE OF CAPITAL OWNERSHIP

Licensing and royalty agreements are not taken into account. The ownership of companies other than man-made fiber producers is not listed, e.g., weaving mills, chemical producers, etc.

For each country, the percentage following the first-named producer is the portion owned by the captioned company; the remainder of the entry shows other ownership. For example, Akzo N.V. owns 25% of Cyanenka of Spain, while American Cyanamid owns 40% and La Seda de Barcelona owns 35%. Also note that Akzo owns 57% of La Seda de Barcelona.

AKZO N.V. (NETHERLANDS)

The olefin data shown comprise (a) the tonnages of yarn, monofilaments and staple plus film fiber reported by official sources, such as governments, trade associations or other statistical agents plus (b) estimates of the additional tonnages of olefin fiber not included in the aforementioned data. Note text on page 82.

No attempt is made to strike a world total inasmuch as data are incomplete for a number of countries, particularly in Latin America, East Europe and Other Africa, Asia & Oceania.

* Data for People's Republic of China, North Korea & U.S.S.R. are not included here.

a. Acetate includes triacetate.

b. Acrylic includes modacrylic.

c. Nylon includes aramid.

d. All Other includes 1 azlon, 2 biconstituent, 4 fluorocarbon, 1 polycarbonate, 1 polychlal, 1 polyesteramide, 1 polyvinylfluoride, 1 promix, 8 saran, 18 spandex or elastomer, 4 vinal and 7 vinyon plants, for a total of 49 plants producing these other fibers.

[a] Filament yarn plus monofilament shipments by primary trade or end use; olefin includes spunbonded polypropylene but does not include spunbonded polyethylene.

[b] Small poundages of polyester are included in All Other.

[c] Small poundages of olefin are included in All Other.

[d] Small poundages of nylon and polyester are included in All Other.

[e] Other Broad Woven except carpets, tire fabric, flat belting, etc. The olefin poundages include other home furnishings applications only, i.e., industrial applications are in All Other.

[f] Narrow Woven includes apparel ribbons and braids, auto seat belts and/or furniture webbing.

[g] Small poundages of olefin are included in All Other.

[h] All Other includes sewing thread and other industrial applications. The olefin poundages include sliver knit backing. Also includes indirect exports starting 1st Quarter 1980.

[i] These poundages are included in the Total Domestic area above.

a. Olefin poundages are included in All Other.

b. Rayon and nylon poundages are included in All Other.

c. Nylon poundages are included in All Other.

d. Rayon and acrylic poundages are included in All Other.

e. Wet & dry laid and needled batts only.

f. Acrylic poundages are included in All Other.

ANNOUNCEMENT

The 1982 Textile Fiber End Use Survey will appear in the September issue of the ***Textile Organon***. Previously, the end use survey appeared in the November issue of the ***Organon*** each year.

As a service to our readers, the earlier publication of this survey will permit the more timely use of these crucial data.

The U.S. listing of man-made fiber producers, normally found in September, will now appear in November.

SOURCE: U.S.Census Bureau Report IM145X.

NES - Not elsewhere specified.

* These items are not reported by the Census as cellulosic vs. noncellulosic. Any separation between cellulosic and noncellulosic is estimated, based mainly on average declared value.

a. Also includes 310.0510 & .0610.

b. Also includes 310.0530, .0550, .0630 & .0650.

c. Also includes 309.0340, .0365, .0500, .0630, .0640 & .0665.

d. There may be some acetate yarn in these data, but the Census figures do not permit a segregation.

e. Also includes 310.1110 & .1114.

f. Also includes 310.2010 & .2110.

g. Also includes 310.1150, .1155, .1170, .2030, .2050, .2130 & .2150.

h. Also includes 310.5005 & .5030.

i. Also includes 310.4046, .4047, .4050, .5015, .5046, .5047, .5049 & .5051.

j. Chiefly roving. Also includes 309.9800 & .9900.

a. Year-to-date totals except for stock, which is the latest month's data.

b. The monthly production of each fiber may be calculated as total shipments plus a stock increase, or less a stock decrease, over the month.

c. Producers' total domestic plus export shipments.

d. Rayon yarn data are available annually only; see page 37 of the March issue.

e. Data for nylon exclude aramid.

f. Industrial is defined as 500 denier and coarser with an Instron tenacity of 7 grams or more per denier.

g. Low denier industrial is defined as finer than 500 denier with an Instron tenacity over 5.5 grams per denier.

h. Olefin yarn+monofilaments also includes spunbonded polypropylene and film fiber produced for textile end uses.

i. Saran and spandex data are not included in these totals. See page 37 of the March issue for annual data on these yarns.

j. Acetate staple+tow data are available annually only; see page 37 of the March issue.

MONTHLY REVIEW

Highlights

June Shipments of Olefin Yarn+Monofilaments Topped 62 Million Pounds . . . see page 128.

1982 World Production of Man-Made Fiber Totaled 28,855 Million Pounds . . . see page 115.

World Production of Cotton Totaled 32,357 Million Pounds in 1982 . . . see page 115.

World Man-Made Fiber Survey in Millions of Pounds . . . begins page 115.

A record was set in June as more pounds of olefin yarn+monofilaments were shipped than in any other month in history.

Nylon yarn shipments to the carpet trades rose for the fifth consecutive month, though shipments of both nylon industrial and nylon textile yarn+monofilaments fell in June.

Shipments of polyester yarn+monofilaments fell in June, but shipments of polyester industrial yarn+monofilaments rose for the third straight month.

Acrylic+modacrylic staple+tow shipments fell in June, but shipments of polyester staple+tow rose for the second straight month and shipments of nylon staple+tow rose for the fourth consecutive month.

MAN-MADE FIBER PRODUCERS ASSOCIATION (MMFPA) PRESIDENT CHARLIE JONES TO RETIRE: CARLISLE NAMED SUCCESSOR

Charlie W. Jones, President of Man-Made Fiber Producers Association since 1970, plans to retire at the end of the year, it was announced this week by Gerald P. Elden, Chairman of the MMFPA Board, during its quarterly Board meeting in Washington, D.C. Charles R. Carlisle was named Executive Vice President, effective August 1, and will take over duties as MMFPA President on January 1, 1984.

In making the announcement, Elden pointed out that Mr. Jones had served, at the request of the Board, two and one-half years beyond normal retirement, and under his leadership substantially expanded and guided the Association's programs in legislative, technical, public relations and educational areas.

Prior to accepting the MMFPA position, Mr. Carlisle was a Vice President of St. Joe Minerals Corporation for eight years and served in both the New York headquarters and the Washington office. He was heavily involved in international trade and governmental affairs.

From 1971 to 1974, he was Chairman of Lead-Zinc Producers Committee and also has been a deputy director of the Commodities Division, U.N. Conference on Trade and Development in Geneva. In addition, his experience includes fourteen years as a Foreign Service Officer with the U.S. Department of State.

Prior to becoming President of MMFPA in 1970, Mr. Jones held key executive positions with Signal Companies, American Carpet Institute and National Cotton Council. He also served as Administrative Assistant and Legislative Assistant to Senator John C. Stennis (D-MS) from 1954-1960.

Chairman Elden also announced that the Board had elected Larry K. Martin as Vice President of the Association, effective immediately. Martin has served as Executive Assistant to the President, Secretary and Treasurer of the Association since 1972. He formerly served as Administrative Assistant to Senator J. Caleb Boggs (R-DE).

World Man-Made Fiber Survey (Million Pounds)

Featured on pages 115-123 is our annual survey of the world man-made fiber industry in *millions of pounds*. The included tables state the world data as converted from thousand metric tons as found in the tables of the June ***Organon***, pages 81, 83-89 & 107.

The 1982 noncellulosic fiber production and planned producing capacity survey in millions of pounds begins on page 116 and the cellulosic fiber production and planned producing capacity survey in millions of pounds begins on page 119.

Olefin, textile glass, and acetate staple and tow production and planned producing capacity in millions of pounds are found on page 122.

Earlier years' world data for most of the tables contained in this issue will also be found in the January 1962 ***Textile Organon*** Base Book and in the June 1966 and 1970 and July 1979-1982 issues of the ***Organon***.

The 1982 import-export data used to tabulate net available supply by country are not complete at this time. When these data are obtained, the 1982 net available supply tables (in millions of pounds and thousands of metric tons) will be published in the ***Organon***.

In addition, the 1982 polyester and nylon textile, carpet & industrial yarn production breakdown for Western Europe is not available. These data will also be published in a later issue of the ***Organon***.

WORLD PRODUCTION OF CERTAIN TEXTILE FIBERS

MILLION POUNDS & *Percent*

TYPE OF FIBER	1976	1977	1978	1979	1980	1981	1982

The silk and man-made fiber data are on a calendar-year basis, while the figures for cotton and wool are on a seasonal basis.

MAN-MADE FIBERS: Data are from pages 119 and 123, as noted. Textile glass fiber and olefin production on page 122 are not included.

COTTON: International Cotton Advisory Committee. Also see December 1982 ***Organon***.

WOOL: Commonwealth Secretariat & The Wool Bureau, Inc. The data are on a scoured basis. Also see the December 1982 ***Organon*** issue.

SILK: International Silk Association; Food and Agriculture Organization of the United Nations.

Y means yarn+monofilaments. **S** means staple+tow+fiberfill. **TOT** means total.

The producing capacity, in operable condition, is shown on an annual basis as of March 1983 (1983) and December 1984 (1984).

These totals do not contain data for the fibers produced in North Korea.

a. Benelux includes Belgium, Netherlands and Luxembourg.

Y means yarn+monofilaments. **S** means staple+tow. **TOT** means total.

The producing capacity, in operable condition, is shown on an annual basis as of March 1983 (1983) and December 1984 (1984).

These totals do not include data for production of cellulosic fibers in North Korea.

Production and producing capacity by country, divided between rayon and acetate yarn, is given on page 121. Also note page 122 for data on production of acetate staple and cigarette tow.

The olefin data shown comprise (a) the poundages of yarn, monofilaments and staple plus film fiber reported by official sources, such as governments, trade associations or other statistical agents plus (b) estimates of the additional poundages of olefin fiber not included in the aforementioned data. Note text on page 82 of the June *Organon*.

No attempt is made to strike a world total inasmuch as data are incomplete for a number of countries, particularly in Latin America, East Europe and Other Africa, Asia & Oceania.

Textile glass fiber is defined on page 90 of the June *Organon*. The textile glass fiber producing capacity, in operable condition, is shown on an annual rate basis as of March 1983 (1983) and December 1984 (1984).

a. The data for East Europe do not include estimates for the U.S.S.R.

b. The Other Africa, Asia & Oceania countries are Australia, India and South Africa.

U.S.A. nylon producing capacity data do not include aramid.

Y means yarn+monofilaments. **S** means staple+tow+fiberfill. The regional totals here are the same as those on pages 116-118.

a. Other fibers are alginate, azlon, spandex or elastomer, saran, TFE fluorocarbon, vinal and vinyon.

SOURCE: National Association of Hosiery Manufacturers · *1982 Hosiery Statistics.*

a. Includes opaque hosiery, which is defined as hosiery knit on 370 needles or more, using leg yarn 30 denier or coarser.

ANNOUNCEMENT

The 1982 Textile Fiber End Use Survey will appear in the September issue of the ***Textile Organon***. Previously, the end use survey appeared in the November issue of the ***Organon*** each year.

As a service to our readers, the earlier publication of this survey will permit the more timely use of these crucial data.

The U.S. listing of man-made fiber producers, normally found in September, will now appear in November.

SOURCES: The man-made fiber import and export data are from the U.S. Bureau of the Census. The man-made, cotton and wool manufactures data are from *Cotton and Wool Outlook & Situation*, a publication of the U.S. Department of Agriculture.

The total man-made fiber and manufactures import, export and balance data of this table cover the cellulosic and noncellulosic fibers only; textile glass fiber is excluded.

a. **E** means a net export balance; **I** is a net import balance.

b. Acetate tow is excluded.

c. The fibers included are shown as "Total Man-Made Fiber Above" on page 127 of this issue for imports and page 76 of the May issue for exports.

d. Man-made fiber equivalent.

e. These import data do not reflect significant poundages of luggage. On a monthly basis, from May 1982 - March 1983, the poundages are (in millions of pounds): 8.0, 17.9, 17.2, 17.2, 14.0, 12.3, 12.6, 10.0, 12.9, 12.6 & 14.5.

f. Raw cotton equivalent. Data are similar to those on page 39 of the March Textile Organon.

g. Raw wool content. The data differ from those on page 39 of the March Textile Organon to the extent that noils and waste are included here.

SOURCE: U.S.Census Bureau Report IM145X.

NES - Not elsewhere specified.

* These items are not reported by the Census as cellulosic vs. noncellulosic. Any separation between cellulosic and noncellulosic is estimated, based mainly on average declared value.

a. Also includes 310.0510 & .0610.

b. Also includes 310.0530, .0550, .0630 & .0650.

c. Also includes 309.0340, .0365, .0500, .0630, .0640 & .0665.

d. There may be some acetate yarn in these data, but the Census figures do not permit a segregation.

e. Also includes 310.1110 & .1114.

f. Also includes 310.2010 & .2110.

g. Also includes 310.1150, .1155, .1170, .2030, .2050, .2130 & .2150.

h. Also includes 310.5005 & .5030.

i. Also includes 310.4046, .4047, .4050, .5015, .5046, .5047, .5049 & .5051.

j. Chiefly roving. Also includes 309.9800 & .9900.

---

a. Year-to-date totals except for stock, which is the latest month's data.

b. The monthly production of each fiber may be calculated as total shipments plus a stock increase, or less a stock decrease, over the month.

c. Producers' total domestic plus export shipments.

d. Rayon yarn data are available annually only; see page 37 of the March issue.

e. Data for nylon exclude aramid.

f. Industrial is defined as 500 denier and coarser with an Instron tenacity of 7 grams or more per denier.

g. Low denier industrial is defined as finer than 500 denier with an Instron tenacity over 5.5 grams per denier.

h. Olefin yarn+monofilaments also includes spunbonded polypropylene and film fiber produced for textile end uses.

i. Saran and spandex data are not included in these totals. See page 37 of the March issue for annual data on these yarns.

j. Acetate staple+tow data are available annually only; see page 37 of the March issue.

A publication of the Textile Economics Bureau, Inc.

MONTHLY REVIEW

Highlights

June U.S. Imports of Noncellulosic Staple+Tow Topped 9.1 Million Pounds . . . see page 135.

Second Quarter 1983 Production of Nylon Staple +Tow Totaled 234.9 Million Pounds . . . see page 133.

Second Quarter 1983 Domestic Shipments of Polyester Staple+Tow Totaled 540.4 Million Pounds . . . see page 133.

Total Noncellulosic Staple+Tow Production for Second Quarter 1983 Hit 1, 015.5 Million Pounds . . . see page 133.

Shipments of nylon yarn to the carpet trades fell in July, but these shipments were nearly 44% above the corresponding July 1982 level.

Polyester textile yarn+monofilament shipments fell for the third consecutive month and shipments of polyester industrial yarn+monofilaments fell to the lowest level yet this year.

Olefin yarn+monofilament shipments fell for the second straight month, but for the year to date the olefin yarn+monofilament total rose to a level over 18% above the corresponding January-July period of 1982.

Acrylic+modacrylic staple+tow shipments fell for the second straight month and shipments of nylon, polyester and olefin staple+tow each fell in July.

FOOTNOTES FOR TABLE ABOVE & OPPOSITE

"Imports" are imports for consumption, as reported by the U.S. Census Bureau.

a. Data for rayon and "Other" noncellulosic yarns (chiefly saran & spandex) are available annually only; see pages 36 & 37 of the March 1983 issue for further details on these yarns.

b. Nylon includes Aramid in 1982.

c. Olefin Yarn+Monofilament data also include film fiber as well as spunbonded polypropylene.

d. Yarn imports include singles and plied.

e. Acetate staple+tow data are available annually only; see pages 36 & 37 of the March 1983 issue for further details.

f. These figures are composites of the nylon, acrylic+modacrylic, polyester and olefin staple imports, i.e., Commodity Numbers 309.4338, .4342, .4345 & .4346.

SOURCE: U.S.Census Bureau Report IM145X.

NES - Not elsewhere specified.

* These items are not reported by the Census as cellulosic vs. noncellulosic. Any separation between cellulosic and noncellulosic is estimated, based mainly on average declared value.

a. Also includes 310.0510 & .0610.

b. Also includes 310.0530, .0550, .0630 & .0650.

c. Also includes 309.0340, .0365, .0500, .0630, .0640 & .0665.

d. There may be some acetate yarn in these data, but the Census figures do not permit a segregation.

e. Also includes 310.1110 & .1114.

f. Also includes 310.2010 & .2110.

g. Also includes 310.1150, .1155, .1170, .2030, .2050, .2130 & .2150.

h. Also includes 310.5005 & .5030.

i. Also includes 310.4046, .4047, .4050, .5015, .5046, .5047, .5049 & .5051.

j. Chiefly roving. Also includes 309.9800 & .9900.

---

a. Year-to-date totals except for stock, which is the latest month's data.

b. The monthly production of each fiber may be calculated as total shipments plus a stock increase, or less a stock decrease, over the month.

c. Producers' total domestic plus export shipments.

d. Rayon yarn data are available annually only; see page 37 of the March issue.

e. Data for nylon exclude aramid.

f. Industrial is defined as 500 denier and coarser with an Instron tenacity of 7 grams or more per denier.

g. Low denier industrial is defined as finer than 500 denier with an Instron tenacity over 5.5 grams per denier.

h. Olefin yarn+monofilaments also includes spunbonded polypropylene and film fiber produced for textile end uses.

i. Saran and spandex data are not included in these totals. See page 37 of the March issue for annual data on these yarns.

j. Acetate staple+tow data are available annually only; see page 37 of the March issue.
